Physician Data

U.S. Medical Licensure Statistics 1984 and Licensure Requirements 1985, OP-190/6.

Provides information and statistics relating to medical licensure in the U.S. and Possessions for 1984. $15.00 per copy.

Physician Characteristics and Distribution in the U.S. 1984 Edition, OP-180/5.

Provides basic statistics showing federal and non-federal distribution, characteristics, and trend data. $39.00 per copy. 1986 Edition, OP-180/6. $42.00 per copy

Foreign Medical Graduates in the U.S. 1986 Edition, OP-324.

Provides information on foreign medical graduates in three main sections: Trends, Characteristics, and Location. $42.00 per copy.

Medical Groups in the U.S. 1984, OP-256.

Summarizes the latest survey data and census information for over 15,000 medical groups in the U.S. Includes specialty composition, size, geographic distribution and other group characteristics. $29.95 per copy.

Reference Data

American Medical Directory, 30th Edition, OP-128-6.

A 4-Volume reference guide that lists all U.S. physicians alphabetically and geographically. As well as physicians temporarily residing in foreign countries. $400.00 per set.

The American Health Care System 1984, OP-259.

Summarizes issues and fact regarding U.S. health care systems; includes data tables on health characteristics of U.S. population, physician manpower, and health care financing. 83 pages. $9.95. (Does not include tax, shipping and handling charges.)

Socioeconomic Characteristics of Medical Practice 1985, OP- 228/5.

Provides summary tables on physicians' practice expenses, fees, income, practice activities and enviroment. $25.00 per copy. 1986 Edition, OP- 228/6. Call for price and order information.

Order above publications from Book & Pamphlet Fulfillment, AMERICAN MEDICAL ASSOCIATION, P.O. Box 10946, Chicago, IL 60610. Give title and OP number of publication. Remittance must accompany order.

Prices subject to change. For delivery charges on quantity discounts call the AMA Order Department (312)-280-7168. For credit card orders (Visa, Mastercard only) call toll free 1-800-621-8335. Illinois residents call Collect 312-645-4987.

ACKNOWLEDGEMENTS

Medical School Alumni: 1986 Edition represents the dedication, talents, and contributions of several professional staff. Special recognition should be given to Norbert W. Budde, Ph.D., Director of the Division of Survey and Data Resources, who authorized the publication and assured the availability of resources and Gene Roback, Director of the Department of Data Release Services, for her central role in providing direction and consultation in every phase of the book's development, her insightful review of the manuscript, and her authentication of the Year-End Masterfiles.

The author also wishes to thank Anne Crowley, Ph.D., Office of Educational Directories for her time and valuable assistance in clarifying several of the historical data on medical schools. Art Wisener and Marian Matthews, Department of Systems and Programming, should also be thanked for their programming support, which made possible the state of residency training data in the volume. Appreciation is also extended to staff in the Division of Marketing for their contributions, especially Herb Hinkelman for the design of the cover and David Lahoda, for the development and implementation of the marketing plan.

Medical School Alumni: 1986 Edition would not have been possible without the patience, extensive skills, and cooperation of staff within the Department of Data Release Services. Particular appreciation is extended to Diane Mead for her assistance in co-ordinating the internal production cycle of the project and Kristine Ellison for her skill and patience in coding the text and summary tables for electronic typesetting and for inputting the volume on word processing. A sincere thank you is also extended to Bradley Seidman, who verified the entire volume and summary tables and to Maria Rubio for her typing assistance, and who, with Bradley Seidman, compiled several of the tables and proofed copy.

Finally, a publication of the scope and substance of *Medical School Alumni: 1986 Edition* represents the combined efforts of departments within the Division of Survey and Data Resources, which manage the on-going physician-related data collection and dissemination: the Department of Data Release Services, Physician Biographic Records, Survey Design and Analysis, Data Planning and Evaluation, and List House Activities.

FOREWORD

Medical School Alumni: 1986 Edition is the third in a series of AMA publications intended to provide the medical education community with extensive tabulations on the professional and demographic characteristics of physicians by medical school and year of graduation. The 1986 edition is especially timely because of the growing awareness of the role of medical education in a rapidly changing medical care environment and the substantial changes that have occurred in medical education itself in the last two decades. An extensive introduction discusses several of these developments as a current and historical context for the data that follow. This new edition also extends the earlier ones by presenting more comprehensive analysis of tabulations and graphics in three separate sections — Comparative Data, Characteristics, and Geographic Location.

It is anticipated that, like its predecessors the 1967 and 1975 editions, this volume will be a valuable resource in assisting medical schools to evaluate curriculum and to conduct educational research. The publication should also be of considerable value to other researchers and those confronted with policy decisions or their implementation at the national, state, and local levels.

Norbert W. Budde, Ph.D., Director
Division of Survey and Data Resources

Introduction

Current and Historical Environment

Medical School Alumni: 1986 Edition is the third in a series of three monographs first published in 1967 and again in 1975 by the American Medical Association to provide medical schools with comprehensive statistics on the characteristics and distribution of their graduates. The supply of any occupation or profession depends on the number of persons who receive the appropriate education and training which qualify them to function in that field. Institutions responsible for such education and training affect both the quality and quantity of manpower available to meet consumer demands for the services of that occupation or profession. Because of the importance of medical schools in the production of physicians in biomedical research, in health care delivery, and in other professional activities, there exists an on-going need for information on these institutions and their graduates.

In the 1960s, the American public was seeking as an immediate goal the increased availability of health care services. To this end, organized medicine sought a more comprehensive understanding of the physician as a purveyor of these services and a clarification of the role of ancillary health care providers.[1] Between 1967–1973 many medical schools were experimenting with new types of programs and abbreviated curricula to increase the production of physicians. Concerted efforts for the expansion of US medical education programs also gained momentum through the 1960s and early 1970s when the "shortage of physicians" received considerable publicity.

These efforts resulted not only in an increased first year enrollment — 49.6 percent between 1967 and 1973, but also in the number of applicants to medical schools. Between 1967 and 1973 the number of applicants to US medical schools increased by 98 percent or almost twice the rate of increase in available places[2] — 18,250 (1966–1967) versus 36,135 (1972–1973).[3]

By the 1980s, however, the acceleration of applicants had seemingly stabilized. While in 1972–1973 there were 36,135 applicants to US Medical Schools, ten years later (academic 1982–1983) the number of applicants had decreased to 35,730. This figure was, in turn, approximately 1,000 fewer than for the previous year, a 2.7 percent decrease.[4] In academic 1984–1985, by contrast, the number of applicants rose slightly — 35,944 or 744 more than the 35,200 of the previous year (1983–1984).[5] Despite this increase, an analysis of applicant statistics in the mid 1970s (academic 1974–1975) and in the mid 1980s (academic 1984–1985) reveals a decrease. While in 1974–1975 the number of applicants to US Medical Schools totaled 42,624, by 1984–1985 the applicant pool numbered 35,944[5] — 6,680 fewer for a change of -15.7 percent. Table 1 summarizes the variation in applicant statistics in selected years between 1974–1975 and 1984–1985.

The decade since the mid 1970s also witnessed consistent increases in the number of medical schools and total enrollments per year. In academic 1974–1975 there were 54,074 medical students enrolled in 114 US medical schools. Of these 107 were fully approved to award the MD degree, five had provisional approval, and two were fully accredited to offer the first two years of the medical curriculum.[6] By academic 1984–1985, however, medical school enrollment totaled 67,090 while medical schools had increased in number to 127. Of these, 125 were fully accredited to offer the MD degree, one was fully accredited to offer the first two years of medical education, and one had provisional accreditation. While the decade accounted for an increase of 13,016 enrollments or 24.1 percent growth, the 1984–1985 enrollment indicated a decrease from the previous year — 67,090 (1984–1985) versus 67,443 (1983–1984).[5]

TABLE 1 - U.S. Medical School Applicants for Selected Academic Years 1974-1975 to 1984-1985

Academic Year	No. of Applicants	Academic Year	No. of Applicants
1974-1975	42,624	1981-1982	36,727
1978-1979	36,636	1982-1983	35,730
1979-1980	36,141	1983-1984	35,200
1980-1981*	36,100	1984-1985	35,944

*Ponce, Puerto Rico, and South Dakota did not provide first-year enrollment; 1979-1980 figures were used for these schools.

Source: Medical School Admission Requirements, Association of American Colleges as reported in 85th Annual Report on Medical Education in the United States: 1984-1985. JAMA 1985,254:1568.

In response to medical and scientific advancements, medical schools themselves, since the early 1970s, have undergone substantive change as permitted by their own educational, community, and locational resources. These changes have included, at various times, program complementation in fields related to medicine, as well as responsibility for research in cultural and behavioral aspects of medicine, continuing education programs for physicians, and other endeavors. In an effort to keep pace with the rapid acceleration in the sciences and medicine, the Liaison Committee on Medical Education (LCME) in 1980 authorized a Task Force on Accreditation Policy and Validation of Criteria to develop new standards for the evaluation of medical education that would reflect a consensus of the medical education community regarding the structure and purpose of undergraduate programs.[5,7]

The late 1970s and 1980s were also marked by new patterns in health service delivery, increased supply of physicians with projections of a continuance of the same, discussions regarding the objectives for medical service, and corporate influences on the structure of medical practice. These developments and others served both as the impetus and content for several major reports and studies responsive to challenges that promise to face medicine through the end of this century and into the next.

In 1981, the Association of American Medical Colleges (AAMC) created a panel with a variety of goals that specifically addressed the general professional education of physicians and college preparation of medicine. The results of the panel, published in *Physicians for the 21st Century*, discussed a variety of conclusions and recommendations regarding the quality and tenor of medical education. These included, among others, the acquisition of values and attitudes contributive to the care and concern of individuals and society, concept formation based on a knowledge of the humanities as well as the social and natural sciences, and closer liaisons between undergraduate and graduate medical education. The report also endorsed, as curricular goals, an emphasis on health promotion and disease prevention, the promotion of independent learning and problem solving, and formulation of well-defined purposes of clinical education.[8]

In response to scientific advances and social change the AMA House of Delegates in 1982 adopted and published *Future Directions for Medical Education*, a report of the AMA Council on Medical Education that identified areas for improvement, as required by changing times and circumstances, and also included recommendations formulated by its six Task Forces to assist "in determining the most desirable future directions for medical education."[9] As the major theme, the report specified a balance between generalism and specialism with emphases on biomedical sciences and clinical medicine, thorough education in a specialty, and incentives for a physician's on-going career development through continuing education.

New directions in the social and scientific contexts of medicine together with significant changes in patient attitudes and perceptions regarding health care are also likely to influence the environment of medicine from undergraduate programs through medical practice. In a special report published in the *New England Journal of Medicine* (1983) Tarlov identifies major intersecting forces as significantly responsible for the changing profile of US medicine. They include: the rising supply of physicians, the integration of corporate organizational and operational structures in the health services system, and a new orientation in medical objectives.[10]

The report views the formal industrialization of the health care system with its attempts to control costs through group purchasing of services as a result of the rapid increase of physicians and the concomitant higher aggregate costs of health care delivery. This incorporation of medicine, as seen in several multi-hospital for-profit systems and non-profit hospital corporations with for-profit subsidiaries promotes, according to Tarlov, institutional practice among physicians as they respond to competition among underwriters and provider plans for employee groups by offering services in nontraditional settings with cost savings arrangements.

Changing public perceptions and expectations of health care as well as the "state of the art," Tarlov argues, are also helping to transform US medicine. While the primary medical objective between 1800–1980 sought to prevent epidemically related deaths and that from 1940 to the present to correct physiologically measurable abnormalities, the "principal medical challenge" in the coming era, according to Tarlov, will seek to maintain and improve how a patient functions in normal environments. The emotional distance in doctor–patient relations coupled with skeptical public reaction to the technical climate of medical practice, it is further argued, may well strengthen quality of life and patient functioning as the central objective of medicine in the coming era.[10]

An emphasis on patient health perspectives is also a major feature of the *National Study of Medical Care Outcomes* (e.g., *Medical Outcomes Study* or MOS) that is currently in progress. Designed to expand the debate on health care delivery and financing, MOS includes measures of physical, mental, social/role functioning as well as traditional biomedical assessments. MOS also seeks to determine whether health care expenditures in different care systems and methods of cost controls occur at the expense of health and whether variations in outcome can be attributed to the characteristics of patient, provider, practice, and delivery systems.[11]

Government manpower studies and reports have also addressed the changing profile of US medicine. *The Fifth Report to the President and Congress on the Status of Health Personnel in the US* indicates that while the supply and requirements of health personnel are expected to achieve a rough equivalence in 1990 and 2000, the aggregate physician supply will surpass requirements with some specialties falling below projected requirements.[12] Although the rate of growth will vary by specialty, physician numbers, according to the report, are expected to increase across specialties with few exceptions. Medical Specialties — excluding Primary Care disciplines — are projected to involve the largest growth — an average of 74 percent between 1981 and 2000, with Surgical Specialties increasing an average of 34 percent by the turn of the century and Primary Care disciplines growing by 53 percent.[12]

The current socio-economic and scientific environment of medicine embraces a broad spectrum of topics and issues of interest and concern to individuals and groups within the medical education community. While many students entering medical school have certain preconceptions regarding their future location, specialty and activity choices, and type of practice, the medical school experience undoubtedly exerts considerable influence in strengthening or altering these conceptions and therefore constitutes a prime focus for health manpower studies.

Purpose and Organization of Volume

The 1986 edition of Medical School Alumni contains both summary and detail statistics on graduates of **each of the 125 US Active Medical Schools fully accredited to award the MD degree and with living graduates as of December 31, 1985**. Comparative data for 1975–1985 is also presented for trend analysis. As with the 1967 and 1975 editions, this volume provides these data to assist the medical schools in the development of effective policies that will affect curriculum and the basic focus of educational programs. In a broader sense these types of data are necessary for a school to assess its contribution in fulfilling specific physician manpower needs in a given area and the net effect of medical school expansion on the physician manpower pool. The 1986 edition is further motivated, as discussed earlier, by the changing profile of the physician population, the current socio-economics of medical practice, changes in both public and physician attitudes, and other environmental developments influencing the structure of medicine. These factors have been recognized as important to US health care in America today as any challenge the medical profession has historically faced.[13]

THE FIRST SECTION OF THE VOLUME presents comparative summary data for 1975–1985. These data are intended to give medical schools a historical perspective with which to study further the institutional and demographic changes that occurred over a decade of complex health care developments. Included are separate tabulations of federal and non-federal physicians by country of medical school (US, Canadian, Foreign) and selected variables like state of location, specialty, and activity. Distribution of all graduates for each US Active School by activity, and non-federal physicians by sex in Office Based Primary Care are also provided.

THE SECOND AND THIRD SECTIONS provide both summary and detail tabulations that distribute graduates of each Active Medical School by specialty, activity, location, and other key variables. Tabulations with year of graduation in 10-year intervals from *prior to 1930 through 1985* are also included. All sections contain aggregated data for the categories of Inactive, Foreign, and Canadian Schools.

Classifications of Schools 1975 and 1985

US Active Medical Schools

US ACTIVE MEDICAL SCHOOLS IN 1975 as defined in this publication included 106 US Active Medical Schools and one Puerto Rican Active Medical School fully accredited to award the MD degree in 1975 and five additional programs that provisionally were accredited to offer programs leading to the MD degree as of the same year. These five schools included: University of South Alabama College of Medicine (Public), Mayo Medical School (Private), University of Minnesota at Duluth (Public), Eastern Virginia Medical School (Private), and University of North Dakota at Grand Forks (Public). Although defined as Active Schools, two additional US schools were fully accredited to offer only the first two years of the medical curriculum: the University of Nevada School of Medicine at Reno (Public) and the University of South Dakota at Vermillion (Public). Although Active, these five provisional programs and the two programs fully accredited to offer only the first two years of the medical curriculum are not listed in tables in this volume because no graduates were indicated on the AMA Physician Masterfile as of December 31, 1975. **Thus, tabulations for 1975 include only a listing of the 107**

Active Medical Schools with living graduates as of December 31, 1975 out of the total US and Puerto Rican Active Medical School count of 114.

US ACTIVE MEDICAL SCHOOLS IN 1985 as defined in this publication include the 122 US and three Puerto Rican programs fully accredited to award the MD degree in 1985 and one additional program, that of Mercer University in Georgia (Private) provisionally accredited to offer a program leading to the MD degree effective in 1982. Although an Active School, Mercer is not listed in the tabulations since the first class was scheduled to graduate in 1986 and data for this publication are based on year-end 1985. Although defined as an Active Medical School, the University of Minnesota at Duluth (Public) is fully accredited to offer only the first two years of the medical curriculum. **Thus, tabulations in this volume include a listing of 125 Active Medical Schools with living graduates as of December 31, 1985 out of a total US (includes Puerto Rican) Active Medical School count of 127.**

US Inactive Medical Schools

US INACTIVE MEDICAL SCHOOLS IN 1975 as defined in this publication includes those 102 medical schools in the US which no longer granted the MD degree or were no longer approved to do so as of 1975, **whether or not they had living graduates as of December 31, 1975**. Of the 2,442 living graduates of Inactive Schools in 1975, 874 or 35.8 percent were from Middlesex University School of Medicine in Waltham Massachusetts.

US INACTIVE MEDICAL SCHOOLS IN 1985 as defined in this publication include those 80 medical schools in the US which no longer granted the MD degree or were no longer approved to do so in 1985, **whether or not they had living graduates as of December 31, 1985.** Middlesex University School of Medicine accounted for 687 of the Inactive count of 1,430 or 48.0 percent. The count of 1,430 includes seven graduates from unidentified US Inactive Medical Schools.

Canadian Medical Schools

CANADIAN MEDICAL SCHOOLS IN 1975 included 16 programs in the Dominion of Canada that were fully accredited to award the MD degree in 1975. The aggregated count of 6,481 graduates from Canadian Schools in this volume for 1975 includes graduates from these 16 schools and two additional schools that were no longer operating as medical schools in 1975. These included: Toronto School of Medicine (Toronto) and Medical Faculty of Trinity University (Toronto). Living graduates from these two schools accounted for only three physicians of the Canadian School total.

CANADIAN MEDICAL SCHOOLS IN 1985 included the 16 programs in the Dominion of Canada that were fully accredited to award the MD degree in 1985. The aggregated count for Canadian Schools in tabulations in this volume includes graduates from these 16 schools and three additional schools that were no longer operating as medical schools in 1985. These include: Toronto School of Medicine (Toronto), Medical Faculty of Trinity University (Toronto) and Laval University Medical Faculty (Montreal). Graduates from these three non-operating schools accounted for only 10 physicians of the Canadian total of 8,066 physicians in US medicine in 1985.

FOREIGN MEDICAL SCHOOLS IN 1975 AND 1985 as defined in this publication includes all medical schools in countries other than the US and Canada which had graduates in the US as of December 31, 1975 and 1985. This classification includes both Foreign National Foreign Medical Graduates (FNFMGs) and US Citizen (native and naturalized) Foreign Medical Graduates (USFMGs).

Tables 2 and 3 provide summary data on the number of medical schools and number of living graduates

TABLE 2 - U.S. and Canadian Medical Schools of Graduation by Number of Schools and Number of Living Graduates on the AMA Physician Masterfile for 1975 and 1985

Country/ School	Total No. of Schools	No. of Schools with Living Grads	No. of Living Grads	Total No. of Schools	No. of Schools with Living Grads	No. of Living Grads
	1975			1985		
U.S. Active	114*	107	303,971	127*	125	424,345
U.S. Inactive	102**	102	2,442	80**	80	1,430
Canadian	18+	18	6,481	19+	19	8,066

*Includes Puerto Rican schools.

**Only schools with living graduates are included in count.

+Includes 16 Active schools in 1975 and 1985; 2 Inactive in 1975 and 3 Inactive in 1985.

TABLE 3 - Foreign Medical Graduates by Region of Graduation for 1975 and 1985

Country/ Region of Grad.	1975 Total Physicians	1975 Percent	1985 Total Physicians	1985 Percent

Source: Appendix A-5

in US medicine for year-end 1975 and 1985. These data include physicians who were Not Classified, Inactive or for whom there were Unknown Addresses.

Source of Data

All physician data presented in the volume were developed from the AMA Physician Masterfile as of December 31, 1975 or 1985. Since 1906 the Masterfile has been the most comprehensive source of data on US physicians and their characteristics. It is a major AMA resource for the entire medical field for demographic studies, trend analyses, physician mobility reports, health care planning, and other research projects. A description of the AMA Physician Masterfile immediately follows the INTRODUCTION. Included is a discussion of the historical and current portions of the File, data collection and management procedures conducted by the Division of Survey and Data Resources, as well as information on how to obtain data from the Masterfile.

AMA Physician Masterfile

The AMA has continued to develop a unique and comprehensive data base of physician and medical student information since the establishment of the Masterfile in 1906. Although initially the Masterfile was primarily used by the Association as a record keeping device for membership purposes, today the File is widely considered to be the most complete and extensive source of physician-related information in the US. The File contains current and historical data on all physicians, including members and non-members of the Association, and graduates of foreign medical schools who are in the US and meet education standards for primary recognition as physicians. Generally, FMGs residing in the US are incorporated into the Masterfile upon entry into a program of graduate medical training that is accredited by the Accreditation Council on Graduate Medical Education (ACGME). Records for FMGs who, for one reason or another, have not entered ACGME programs are created as they are licensed by a licensing board. Thus, the total US physician population is currently included on the AMA Physician Masterfile.

A record is started on each individual upon entry into medical school or, in the case of foreign or Canadian medical graduates, upon entry into the US. A physician's record includes medical school and year of graduation, sex, and birthdate. As a physician's training and career develop, additional information is added to the File, such as internship and residency training, state licensure data, board certification and National Board data, and other. This information, which comprises the *historical portion* of the Masterfile, facilitates studies of trends in geographic mobility and medical education.

In addition, the current professional activities portion of each physician's record identifies geographical location and current address, type of practice (patient care and non-patient care), specialties (primary, secondary, tertiary), and present employment (group, solo, partnership, medical schools, hospitals, government, and other organizations). These data are particularly useful in manpower research and planning. By definition, this *current portion* of the File is subject to constant change and must be updated continually through intensive monitoring and data collection activities. Over time, the objectives, collection techniques, and needs assessments undergo regular review and change. This review and analysis of the data base is conducted to:

- determine current and future information requirements for long range planning
- develop new validation techniques to improve the File's accuracy and completeness
- analyze methods for Masterfile data collection, maintenance, and dissemination

Collection of Data

A major source of data collection is the *Record of Physicians' Professional Activities* (PPA), a mail questionnaire survey which has been sent every four years since 1969 to all physicians residing in the United States as well as to US physicians residing temporarily overseas. The most recent PPA census was begun in 1985.

Between census years a computerized weekly update system keeps the Masterfile current. Each physician's record is updated to reflect the most recent change in address, specialty, or professional activity. Sources of information indicating changes include AMA mailings or publications, addressing company mailings, physician correspondence, hospitals, government agencies, medical societies, specialty boards, or licensing agencies. Depending upon the source of information and the type of change, a PPA questionnaire may be sent to the physician to verify the change.

Each physician is asked to indicate the number of hours worked per typical week within the following categories:

Professional Activities—hours spent in direct patient care or non-patient care activities (e.g., medical teaching, administration, medical research, other)

Hospital Information—hours spent in a hospital and/or office in a hospital

Specialization—hours spent in primary, secondary, tertiary specialties

Present Employment—hours spent by type of employer (e.g., self-employed solo practice, twophysician practice, group practice, medical school, non-governmental hospital, governmental hospital, other patient care employment, other non-patient care employment)

All returned questionnaires are passed through a series of clerical and computer-editing procedures which assign major professional activity classifications to each physician's record on the basis of hourly information provided.

While the data collected from the *Record of Physicians' Professional Activity* questionnaire represents a major source of information to the Masterfile, data are also obtained through inputs from other organizations and institutions. Primary sources and the data they provide include:

- **Medical Schools**—name, address, birthdate, birthplace, school and year of graduation
- **Hospitals**—physicians in graduate medical training including foreign medical graduates (FMGs) entering US training
- **Medical Societies**—address and membership information
- **National Board of Medical Examiners**—medical students and physicians who have passed all parts of the National Board Examination
- **State Licensing Agencies**—licensure status of physicians
- **Educational Commission for Foreign Medical Graduates (ECFMG)**—FMGs who have been certified by the ECFMG
- **Surgeons General of the US Government**—physicians in government service
- **American Board of Medical Specialties**—physicians certified by American Specialty Boards
- **Physicians**—type of practice, present employment, specialty and preferred mailing address

The AMA Physician Masterfile utilizes data from primary sources only. Information is not entered on the Masterfile unless submitted or verified by a primary source.

While many sources provide data for inclusion on the Masterfile, data are also extracted from the Masterfile for use by these agencies. In addition, the File is used by various state and county medical specialty societies, the pharmaceutical industry, publishers, and ten addressing companies.

Availability of Data

AMA data are available for research and other special purposes. Safeguards to protect the confidentiality of these data and the AMA's proprietary rights have been mandated by the AMA's Board of Trustees. Inquiries concerning the release of data should be directed to the Department of Data Release Services, American Medical Association, 535 North Dearborn St., Chicago, Illinois 60610.

Reference Material and Definitions

The reference material which follows provides definitions and explanations of the specific physician characteristics that are included in the tabulations of this publication. These materials are presented as a common reference base to facilitate the analysis and interpretation of the data.

School and Year of Graduation

As indicated in the *Introduction*, physicians in this volume are grouped into one of four classifications as graduates of US Active Schools, US Inactive Schools, Canadian, or Foreign Schools. US and Puerto Rican Active Medical Schools (e.g., fully or provisionally accredited to award or offer programs leading to the MD degree) are further designated by ownership in the categories of **Public** and **Private**. The first section of the volume provides comparative data on physicians by school of graduation for both 1975 and 1985 while the *Characteristics* and *Geographic Data Sections* present only 1985 data.

In 1975, of the total 114 US and Puerto Rican Active Medical Schools, 65 were Public and 49 were Private. The Private School count in 1975 included three medical schools in Pennsylvania that were then Private but whose status was later changed to state-related: University of Pittsburgh, Temple University, and Pennsylvania State University.[1,2] These three schools that were *state-supported but not state-owned* in 1985 are indicated in the tabulations for 1985 as Public Schools. *Of the 107 Active Schools* (US and Puerto Rican) *listed in the tabulations as having living graduates as of December 31, 1975, 60 were Public Medical Schools and 47 were Private Medical Schools.*

In 1985 of the total 127 US and Puerto Rican Active Medical Schools, 77 were Public and 50 were Private. The Public School count in 1985 included the three state-supported but not state-owned (e.g., *state-related*) schools listed above. Of *the 125 US Active Schools with living graduates, 49 were Private Medical Schools and 76 were Public Medical Schools.* Each Active Medical School in the tabulations for both 1975 and 1985 is accordingly indexed as Public or Private or classified as such under labeled sub-groups. The University of Louisville in Kentucky in 1975 had Private School designation but in 1985 had a Public School designation.[1,2] In Table A-5, where both 1975 and 1985 data appear in adjacent columns, the University of Louisville, the University of Pittsburgh, Temple University, and Pennsylvania State University are designated with an asterisk to signify the change in status over the 10-year period. In tables displaying only 1975 or only 1985 data, these schools are labeled as Public or Private to reflect their status for that given year.

Although New Jersey Medical School (Rutgers) as of July 1, 1986 changed its name to Robert Wood Johnson Medical School, it is listed in the tabulations as New Jersey Medical School since all data for the publication were derived from the year-end 1985 AMA Physician Masterfile. Other school related explanations include statistics for the University of California (Irvine) as represented in Table C-4 and Appendix A-2. In 1962, 2,695 graduates of the Los Angeles College of Osteopathic Physicians and Surgeons were granted M.D. degrees upon successful completion of a qualifying exam by the University of California (formerly the California College of Medicine). These physicians are not included in the table in Appendix A-2. Although influencing the count in Table C-4, information on residency training for these physicians is incomplete.

Major Professional Activity

Major professional activity classifications are predicated upon hours worked per week as reported by physicians in the *Physicians' Professional Activities Questionnaire* (PPA). The physician's professional activity is shown in the categories of **Practice Involving Direct Care of Patients and Non-Patient Care** (i.e., Other Professional Activity). Patient Care Activities include Office Based practice and Hospital Based practice, which comprises physicians in residency training and full-time members of Hospital Staffs. Non-Patient Care activities include Medical Administration, Medical Teaching, Medical Research, and Other Medical Activities.

The AMA receives residency data from two separate sources at different reporting times. The Division of Survey and Data Resources, which is responsible for the compilation and processing of physician-related AMA Masterfile data, receives information annually on the number of residents-in-training as of December 31 of each year in both accredited and non-accredited programs, as reported by hospitals. These data do not include residency positions available or filled. Data on physicians' graduate medical education (GME) as reported in the AMA's *Directory of Residency Training Programs*, however, are based on graduate medical education programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) and are reported by program directors as of September 1 each year. These data include the number of positions and physician trainees, including those in fellowship programs accredited by the ACGME.

Because of differences in definition of residency training and the time of reporting of data to the AMA, the residency data in this volume which are predicated on the AMA Physician Masterfile are not directly comparable with other residency data such as that published in the AMA's *Directory of Residency Training Programs*.[3]

Physicians who are either retired, semi-retired, permanently disabled, temporarily not in practice, or not active for other reasons are classified as Inactive. Physicians are categorized as Not Classified if the AMA has not received any recent information as to their type of practice and present employment.

Self-Designated Practice Specialty

Self-designated practice specialties listed on the AMA Physician Masterfile have historically related to the record-keeping needs of the American Medical Association and do not imply recognition or endorsement of any field of medical practice by the Association (Appendix E). The AMA Division of Survey and Data Resources manages the Masterfile and records a physician's practice specialty based on physician response to the *Physicians' Professional Activities Questionnaire* (e.g., *Record of Physicians' Professional Activities or PPA Census).* A revised and updated PPA Census form is displayed in Appendix D. The full list of Masterfile codes for self-designated practice specialties is pre-printed on the questionnaire and physicians indicate the average number of hours spent during a typical week in those specialties to which they limit their practice. The specialty with the greatest number of hours becomes the primary specialty, the specialty with the next greatest number of hours becomes the secondary specialty, and so on. The fact that a physician chooses to designate a given specialty on AMA records does not necessarily mean that the physician has been trained or has special competence to practice the self-designated specialty.

Only primary specialties are indicated in this volume. These primary specialties as determined by the professional hours reported by the physicians and should not be confused with the Primary Care specialties, which include the disciplines of General Practice, Family Practice, Internal Medicine, Pediatrics, and Obstetrics/Gynecology.

Specialty classifications in *Medical School Alumni: 1986 Edition* are based on the 38 specialties used by the AMA for statistical purposes (Appendix B-1). A list of the 85 general and sub-specialty categories maintained on the AMA Masterfile is included as reference in Appendix B-2. **Though specialty data based on several of these specialty categories were collected throughout 1985, the AMA Masterfile did not include the new specialty codes until early 1986.**

Other Physician Characteristics

In some tables additional physician classifications are specified through the term *Other*. In Table A-4 *Other Category* refers to physicians who are Not Classified, Inactive, or whose address is unknown. All activity tables include the category *Other Activity* as one instance of Non-Patient Care (see Major Professional Activity). *Other Activity* refers to physicians employed by insurance carriers, pharmaceutical companies, medical societies, etc. Appendix B-4 delineates *Other Activity* in detail. *Other* as a specialty classification (Table A-2 and all specialty tables) refers to a specialty designation a physician may record on the PPA questionnaire that cannot be categorized within the usual AMA listing of specialties.

Residency Data

Residency training data are presented in this publication in essentially two separate types of tabulations. Residency data in major professional activity tables (e.g., *Table A-4 Series*) comprise a Residents-All Years category within Hospital Based practice. This category as explained earlier above (see Major Professional Activity) refers to physicians in accredited and non-accredited training programs in the listed specialties for the designated year (e.g., December 31, 1985). *The total physicians column in these tables, therefore, includes both physicians practicing in the same listed specialties and those in residency training.*

Conversely, the *total column in Table C-4* (state of location by states of residency training) *includes physicians in practice as well as those in categories of Not Classified, Inactive or Address Unknown as of 1985 for whom the AMA Masterfile shows residency training information.* Residency training in these tables refers **only to the last or most recent location of residency training** and is not synonymous with completion of a residency program. Similarly, Table C-4 does not preclude the possibility that a physician may have been in two or more residencies within any one state or several other states.

Location of residency training in Table C-4 is further defined as the **same state** as a physician's state of location, **states contiguous** to the current state of location, or **states other** than those in either of these categories. A listing of the contiguous states for each US state (except Hawaii and Alaska) is provided in Appendix C-2. If there is training information for a physician on the AMA Masterfile, but no state, the designation is given as **Unknown**.

Federal and Non-Federal Physicians

Designations of federal and non-federal employment are indicated in the detail tables found in this publication. All tables in the text refer to both federal and non-federal physician populations unless otherwise indicated. Federal status is defined as full-time employment by the federal government, including the Army, Navy, Air Force, Veteran's Administration, the Public Health Service, and other federally funded agencies. Federal and non-federal physicians are distributed throughout this volume for a variety of key professional characteristics. Location distributions are provided for the 50 states, Puerto Rico, District of Columbia, and the Possessions, which include the Virgin Islands, the Pacific Islands, and APOs/FPOs.

Board Certification

Board certification by one or more of the 23 American Specialty Boards represents a voluntary effort on the part of the physician. The process of certification entails a complex and rigid series of requirements, including examination and successful completion of an approved residency training program. The licensed physician may practice any specialty regardless of board certification status. Tables in this publication indicate board certification status only as **certified** and **not-certified**. The category certified includes (1) *certified by the board corresponding to a physician's primary specialty* (2) *certified by the corresponding board and non-corresponding board(s)* or (3) *certified by a non-corresponding board.* Only primary specialties are listed in the board certification tables in this publication. Where board certification status is indicated by school of graduation, only physicians' primary specialties are implied. Though the attainment of certification demonstrates proficiency within a chosen discipline, "The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, or a license to practice medicine or a specialty. The boards do not in any way interfere in the regular or legitimate duties of any practitioner of medicine."[4]

A listing of the American Specialty Boards and information regarding certification in subspecialties and the granting of certificates of special competence are provided in Appendix B-3.

MSA Comparative Data 1975-1985

Comparisons of data contained in this section indicate changes in the locational preferences of physicians as well as their specialty and activity selections and other career options. These data also reflect the substantial environmental change that occurred in US medicine in the decade between 1975–1985, a change that has invited and continues to invite discussion among medical educators and practitioners regarding the future direction of the medical schools themselves. Presented as a basis for curriculum evaluation, assessment of educational mission and focus, and other policy-related variables, the data should be viewed within the larger context of the health care system itself, its growing diversity in structure and access to care, and the implications these developments suggest for the decades ahead.

Between 1975–1985 the total US physician population grew by 158,974 for a growth of 40.4 percent while graduates from US Active Schools in the same interim increased by 120,374 for a percent change of 39.6 percent. The highest growth rate, however, was indicated for foreign medical graduates (FMGs) — 47.0 percent, an increase of 38,027 physicians. This growth was in large part the result of favorable legislation and a liberal immigration policy intended to alleviate physician shortages as perceived in the post World War II period and through the 1960s.[1] As of year-end 1975, there were 107 Active Medical Schools in the US with 303,971 living graduates. Sixty of these schools were public institutions whose graduates accounted for 46.9 percent of all living graduates from US Active Medical Schools (142,656 MDs). By year-end 1985, however, the number of US Active Schools with living graduates had increased to 125, accounting for 424,345 physicians. There were 76 Public Schools in 1985, comprising 55.0 percent of all US Active School graduates — 233,563 physicians.

State of Location and Country of Graduation *(Table A-1 Series)*

The location of graduates from each of the 125 US Active Medical Schools is presented in the detail tables of the Location Section (Table C Series). The Table A-1 Series in this section provide a summary and comparative overview of the distribution of graduates from US Medical Schools (Active and Inactive), as well as Canadian, and Foreign Schools for 1975 and 1985. California accounted for the highest percent of physicians from US Active and Canadian Schools in 1975 and 1985 while New York revealed the highest concentrations of FMGs in both years. The same five states (with slight variation in rank) remained the preferred location of MDs from the US Active Schools in 1975 and in 1985: California, Florida, New York, Pennsylvania, and Texas, while four states did so for FMGs: California, Illinois, New Jersey, and New York. Ohio ranked among

**Florida and Illinois were tied with 4.0 percent in 1975. Florida is listed because of alpha sequence.

Source: Table A-1 Series

the five highest states for FMGs in 1975 but was superseded by Florida in 1985. Table 1a displays the percent representation of MDs by country of graduation in the *five highest states ranked for size* in both 1975 and 1985. In 1975, as a study of Table A-1 Series also indicates, over three-fourths (77.2%) of all physicians in US medicine were graduates of US Active Medical Schools. Each of the 50 states matched or exceeded the national average of 77.2 percent US Active School graduates except Puerto Rico (44.7%), the Canal Zone (64.3%), and the 14 states profiled in Table 1b. As Table 1b also reveals, *in 1985 slightly more than three-fourths of all physicians* in the US were again graduates of US Active Medical Schools (76.8%). Eleven states and Puerto Rico were below the national average. In 1985 FMGs were in the plurality in Puerto Rico (53.6%); New Jersey had the next highest FMG concentration (42.7%), followed by New York (38.3%), Illinois (33.9%), and West Virginia (31.4%).

Specialty and Country of Graduation
(Table A-2 Series)

The trend toward specialization in the 1960s and 1970s is reflected to some extent in the growth rate for General/Family practice between 1975 and 1985 although these disciplines combined the single largest specialty in absolute terms for both years. Total MDs in General/Family practice numbered 54,557 in 1975 or 13.8 percent of the total physician population for the year (Table 1c). By 1985, although the proportions of General/Family practitioners out of total MDs was only slightly lower — 12.1 percent over the decade, they increased by 12,494 for a percent growth of approximately 23.0

Source: Table A-2 Series

percent (Table 1d). General/Family practitioners from US Active Schools totaled 45,246 MDs in 1975 or about 15 percent of all physicians from US Active Schools (Table 1c). In 1985, the percent representation was 12.6 percent (53,583) for a percent growth of 18.4 percent (Table 1d) — 8,337 more physicians in a decade. Table 1c further reveals that the representation of General/Family practitioners remained at approximately 10 percent of total FMGs — 9.5 percent (1975) and 10.1 percent (1985). Percent growth of General/Family practitioners for FMGs, however, was at 54.1 percent (Table 1d).

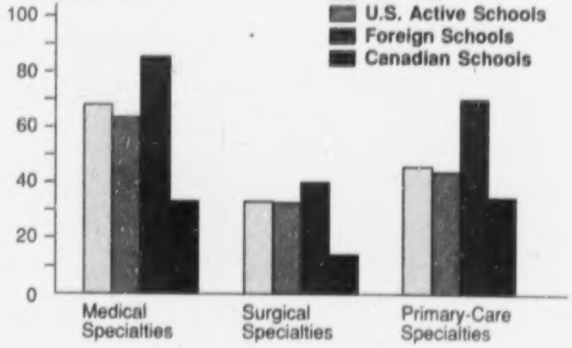
As Table 1d indicates, while US Active School graduates in General/Family practice grew by 18.4 percent between 1975–1985, in Internal Medicine and Pediatrics they did so by nearly 60 percent or more while in Obstetrics/Gynecology they grew by approximately 40 percent. These data suggest a possible change from tradition in American medicine where, historically, delivery of Primary Care was the purview of the General (Family) practitioner to the more recent assumption of Primary Care delivery by Internists, Pediatricians, and Obstetricians. However, the FMG growth patterns in the Primary Care Specialties were dramatically different from those of the US medical graduates (USMGs). FMG Primary Care physicians grew by nearly 70 percent with highest growth rate indicated for Pediatricians — 84.7 percent. The Canadian growth rate for General/Family practitioners slightly exceeded that of FMGs — 54.8 percent vs. 54.1 percent. Further analysis of Table 1d illustrates that the percent growth for the composite of Primary Care Specialties (all schools) between 1975-1985 was a 47.0 percent; for US Active Schools, 43.0 percent; and for Foreign Schools, 68.7 percent.

A further analysis of Table 1c also reveals that cumulatively, physicians in Primary Care in 1975 accounted for 38.6 percent of the entire US physician force. By 1985, their representation had increased slightly to 40.5 percent of total. The percent proportion of Primary Care providers from US Active Schools out of total US Active School graduates remained virtually unchanged in the 10-year interim — 40.1 percent (1975) and 41.0 percent (1985). The proportion of Primary Care physicians out of the total FMG population for 1975 and 1985 differed by about five percent — 34.0 percent (1975) and 39.2 percent (1985). Canadians demonstrated similar representational patterns, with Primary Care MDs accounting for approximately 30 percent of all Canadian MDs in 1975 (29.9%) and 32.4 percent in 1985.

An analysis of the data in the Table A-2 Series indicates that between 1975–1985 Medical Specialties (all schools) grew by over 60 percent (67.8%), for a gain of 64,480 physicians, dramatically exceeding the percent change for the Surgical Specialties, which grew by approximately one-half this amount — 33.5 percent or 32,141 physicians. FMGs demonstrated the highest growth rate for the Medical Specialties among the country of graduation categories — 85.2 percent — followed by the US Active Schools (64.2%) and the Canadian Schools (34.0%). FMGs also had the highest growth rate for the Surgical Specialties — 38.3 percent. The US Active Schools showed a 33.1 percent growth and the Canadian Schools, a 14.1 percent change. Figure 1 illustrates the percent growth in the Medical, Surgical, and Primary Care Specialties for each of these country of graduation categories.

FIGURE 1

Percent Change for Medical, Surgical, and Primary Care Specialities by Country of Graduation, 1975 and 1985



Source: Table 1d and Table A-2 Series

The five Primary Care Specialties of General/Family Practice, Internal Medicine, Obstetrics/Gynecology and Pediatrics together with General Surgery and Psychiatry comprised over one-half of all US Active School graduates in both 1975 (53.8%) and 1985 (53.4%). In 1975 and 1985 the Primary Care Specialties of General/Family Practice, Internal Medicine and Pediatrics together with General Surgery, Psychiatry and Anesthesiology accounted for the plurality of FMGs — 50.5 percent (1975) and 54.1 percent (1985). Table 1e charts the *six highest specialties ranked for size in both 1975 and 1985 for US Active, Foreign, and Canadian Schools.* In contrast, Table 1f illustrates those specialties containing the lowest and highest representation of graduates from US Schools, both Active and Inactive. In both 1975 and 1985 for specialties with lowest representation of USMGs, Anesthesiology comprised highest numbers of USMGs — 7,955 (1975) and 14,093 (1985). In terms of percent proportion of USMGs out of total physicians, however, Anesthesiology ranked fourth with 61.9 percent USMGs in 1975 and 64.0 percent 10 years later. Family Practice comprised the largest count of physicians among those specialties showing the highest representation of USMGs in 1975 (10,261) but ranked second in percent proportion of USMGs out of the total physician complement (89.5%). In 1985 Orthopedic Surgery had the largest numerical representation of USMGs (15,143) among the specialties in the high group but ranked fourth (88.2%) in percent proportion of USMGs out of total physicians.

Source: Table A-2 Series

Activity and Country of Graduation
(Table A-3 Series)

An analysis of Table A-3 Series reveals that MDs in Office Based practice from US Active Schools accounted for 177,617 physicians out of a total US Active School Patient Care cohort of 244,491 MDs. In 1985, Patient Care MDs in Office Based practice numbered 258,433 from a US Active School Patient Care count of 346,896. These data indicate that close to three-fourths of all US Active School graduates in Patient

Care were engaged in Office Based practice in both 1975 (72.6%) and 1985 (74.5%). These statistics exceeded the proportion of Office Based Patient Care MDs nationally in 1975 (69.1%) but approximated the percent of total Office Based MDs in Patient Care in 1985 (73.6%). The percent representation of FMGs in Office Based practice increased dramatically in the same decade — from slightly more than one-half (53.4%) of all FMGs in Patient Care in 1975 to nearly 70 percent (69.3%) 10 years later. The proportion of Canadian graduates, based on total Canadians in Patient Care, also increased — 81.5 percent in 1975 to 86.1 percent in 1985.

Table A-3 Series indicate that the US Active Schools produced proportionately more medical administrators in 1975 than did the Foreign and Canadian Schools — 42.6 percent of all MDs in Non-Patient Care (e.g., Other Professional Activity) from US Active Schools or 9,532 physicians. In the same year, however, FMGs registered the highest percent proportion of medical teachers — 25.1 percent of all Non-Patient Care FMGs. FMGs also had the highest percent representation in Medical Research — 39.4 percent of all FMGs in Non-Patient Care or 2,071 MDs. Medical researchers from US Active Schools accounted for one-fourth of all US Active School graduates in Non-Patient Care the same year.

Table A-3 Series also indicate that US Active and Canadian Schools produced proportionately the same percent of medical administrators in 1985. Medical administrators accounted for 31.3 percent of all US Active School graduates in Non-Patient Care (e.g., Other Professional Activity); the percent representation for Canadian medical administrators was 31.0 percent. FMGs in Medical Administration represented 17.8 percent of Non-Patient Care FMGs. In 1985, FMGs had proportionately the highest representation in Medical Research — 59.0 percent of all FMGs in Non-Patient Care while physicians in Medical Research from US Active Schools and Canadian Schools accounted for 45.0 percent of total Non-Patient Care MDs respectively.

The proportionate distribution of Residents among the school categories illustrates some dramatic changes between 1975-1985. In 1975, both the US Active Schools and Foreign Schools showed minimal variations in proportionate percents of Residents out of all Hospital Based MDs — 61.3 percent for US Active Schools and 57.5 percent for the Foreign Schools, approximating the national average or 59.9 percent Residents out of total Hospital Based physicians. However, by 1985 US Active Schools exceeded the national average of 63.6 percent for Residents out of total Hospital Based MDs with a 70.4 percent of all Hospital Based MDs from US Active Schools in residency training programs. FMG Residents the same year comprised only 43.8 percent of all FMG Hospital Based physicians.

Still another way to present the distributive patterns of physician major professional activities is to chart percent growth over time. As an analysis of Table 1g below indicates, both total physicians and graduates from US Medical Schools (Active and Inactive) increased by approximately 40 percent between 1975–1985 — 40.4 percent (total) and 39.0 percent (US Schools). A study of Table 1g also reveals that while Office Based practice grew by 53.3 percent for total MDs, it did so for US School graduates at 44.8 percent. However, while total physicians in residency training programs increased by 30.5 percent, Residents who graduated from US Schools increased by over one-half — 51.8 percent. The highest percent growth for any activity is seemingly indicated for Research — 7,944 (1975) to 23,268 (1985) for total MDs. However, this apparent significant change can be attributed in large measure to changes in activity classification involved in the AMA's reclassification of physician records that occurred in the late 1960s and continued to affect activity data into the 1970s. The large number of physicians classified as *researchers* can be directly related to the transfer of fellows from the residency category to the Non-Patient Care activity category of Medical Research. Since it was decided that more of the fellows

TABLE 1g - Total Physicians and U.S. Medical School Graduates by Activity, 1975 and 1985

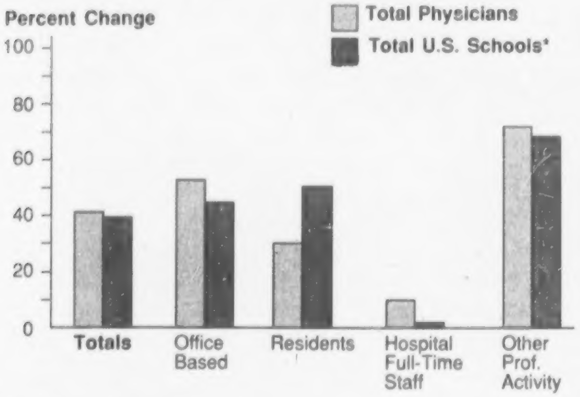
were engaged in research activities than training, the *fellow* category was eliminated from the 1969 PPA questionnaire, forcing physicians in fellowship programs to choose between training and research as the more appropriate classification to reflect their particular activity.[2] Figure 2 depicts the percent change of graduates of all US Medical Schools by major professional activity categories between 1975–1985.

FIGURE 2
Percent Change in Total Physicians and Graduates of U.S. Medical Schools by Activity, 1975 and 1985



Source: Table 1g

*Includes Active and Inactive Schools

School of Graduation and Activity
(Table A-4 Series)

In both 1975 and 1985, graduates of US Active Schools accounted for slightly more than three-fourths of all Patient Care physicians in US Medicine — 78.4 percent (1975) and 77.3 percent (1985). Although they comprised over 8-in-10 (82.4%) of total Office Based practitioners in 1975, their representation in this activity in 1985 had decreased slightly to 78.3 percent. The most dramatic changes in representation occurred, however, in the categories of residency training and full time Hospital Staff. While in 1975, graduates of US Active Schools comprised approximately 70 percent of total residents, by 1985 this percentage had increased to 82.6 percent. The lower proportion of USMGs in the mid-seventies was balanced by the concurrent strong presence of FMGs in residency training — 28.5 percent. Ten years later, however, largely through restrictions imposed by PL 94–484 on residency training candidates and foreign physicians seeking permanent status in the US,[1] the percent of FMG Residents had shrunk to 17.0 percent. Representation for full time Hospital Staff also demonstrated fluctuation over the decade. While FMGs increased their presence in this activity from 31.5 percent in 1975 to 38.1 percent in 1985, US Active School graduates decreased theirs from 66.8 percent (1975) to 60.6 percent (1985). Table 1h presents comparative statistics for US Active, Canadian, and Foreign Schools in terms of total MDs for each of the major professional categories.

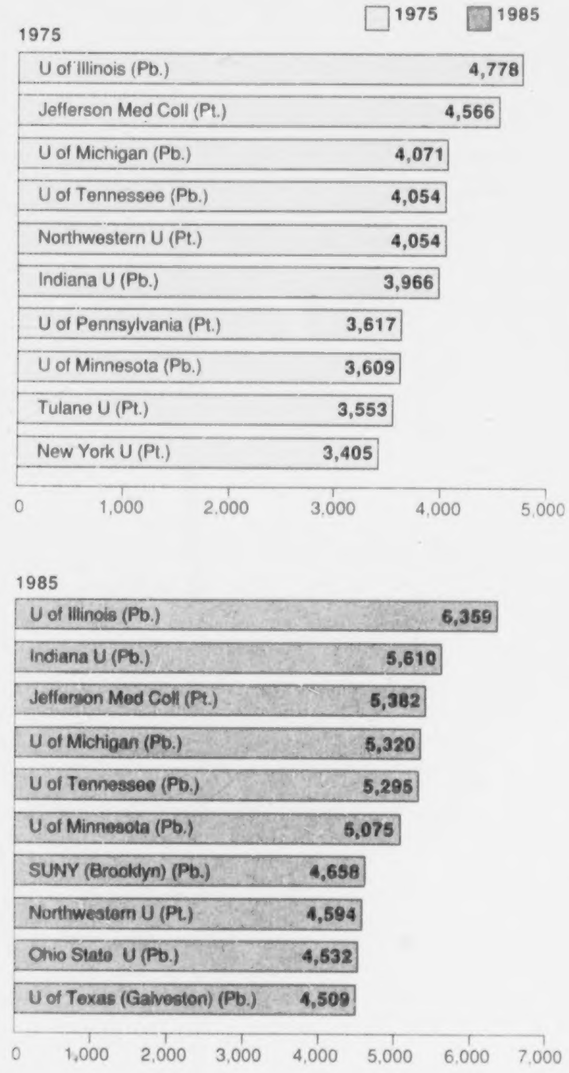
*Percents may not add due to rounding.

Source: Table A-4 Series

A further analysis of Table A-4 Series indicates that in 1975, ten Active US Medical Schools accounted for 39,673 physicians in Office Based practice or slightly more than one-fifth (22.3%) of all Office Based graduates from US Active Schools in the nation. Similarly, 10 US Active Schools produced 19.9 percent of all Office Based graduates from US Active Schools in 1985 or 51,334 MDs. Figure 3 depicts these schools in rank order for largest counts of Office Based physicians. As Figure 3 illustrates, in 1975, Private Schools comprised nearly one-half (48.4%) of the physicians listed among the 10 highest schools ranked for Office Based practitioners (19,195 MDs). By contrast, Private Schools comprised only 9,976 physicians on the 1985 list or 19.4 percent of total.

FIGURE 3
Highest U.S. Active Medical Schools with Graduates in Office Based Practice, 1975 and 1985



Source: Table A-4 Series

The three Medical Schools ranking highest in percent proportions of physicians engaged in Non-Patient Care (e.g., Other Professional Activity) in both 1975 and 1985 were Harvard University, the University of Chicago (Pritzker), and Yale University. In both 1975 and 1985, as Table 1i indicates, the 10 highest schools producing Non-Patient Care physicians were exclusively Private institutions.

An analysis of Table A-4 Series also reveals that, based on absolute counts, 15 US Active Medical Schools in 1975 accounted for 38.7 percent of all US Active School graduates engaged in Non-Patient Care or Other Professional Activities of Administration, Teaching, Research, and Other Activity. These 15 schools cumulatively accounted for 35.8 percent of all US Active School graduates in Medical Administration, 35.4 percent of those in Medical Teaching, and nearly 50 percent of those in Research (49.5%). Of the 15 schools, only four — SUNY (Brooklyn), the University of Illinois, the University of Michigan, and the University of Minnesota — were Public institutions.

In 1985, 15 US Active Medical Schools accounted for approximately one-third of all US Active School graduates in Non-Patient Care activities. These schools also accounted for 33.5 percent of all US Active School graduates in Administration, 30.2 percent in Medical Teaching, and 34.0 percent in Research. Of the 15 schools, four were Public: SUNY (Brooklyn), University of Illinois, University of Michigan, and the University of Minnesota. Table 1j lists the leading schools with graduates for these activities in both 1975 and 1985.

Source: Table A-4 Series

School of Graduation and Primary Care Specialty *(Table A-5 Series)*

Table A-5 Series distribute counts for total non-federal physicians and non-federal physicians in Primary Care, as well as Primary Care Office Based practice by sex for each of the US Active Schools, with aggregate counts for Foreign, Inactive, and Canadian Schools. In 1975, approximately 30 percent (30.2%) of all graduates of US Active Schools in non-federal employment were deliverers of Primary Care in an Office Based setting. In 1985, the percent was slightly lower — 29.2 percent. The ratio for Foreign Schools was 20.4 percent in 1975 but climbed to over one-fourth in 1985 — 27.0 percent. Canadian Schools also showed a growth in non-federal Primary Care Office Based physicians: 23.9 percent (1975) and 26.2 percent (1985).

An analysis of Table A-5 Series demonstrates that the greatest percent proportion of physicians engaged in Office Based Primary Care among non-federal graduates from US Active Schools for 1975 were graduates of the University of California (Irvine) — 45.2 percent or 1,358 MDs out of a total 3,002. Meharry Medical College was second in 1975 with 43.5 percent Primary Care Office Based physicians or 948 MDs from a total of 2,181. In 1985, however, Meharry surpassed the University of California (Irvine) by a slight margin — 41.5 percent vs. 39.4 percent. In 1985, the University of California (Irvine) showed 1,470 MDs in Office Based Primary Care from a total physician count of 3,727: The distribution for Meharry the same year, however, indicated 1,200 Primary Care Office Based practitioners from a total physician base of 2,892.

In 1975 ten highest US Active Schools ranked by size for total non-federal physicians comprised slightly over one-fifth (21.9%) of all US Active School graduates in non-federal employment in US medicine, for a total of 61,362 physicians. These same 10 schools also accounted for 21.0 percent of all non-federal US Active School graduates in Primary Care — 26,559 MDs — and 21.3 percent of US Active School graduates in Primary Care Office Based practice or 18,162 physicians. Table 1k ranks the US Active Schools for total non-federal physicians in 1975 and 1985 with distributions for Primary Care and Office Based Primary Care activity. The table also provides percent

Source: Table A-5 Series

representation for each of the 10 schools in these activities.

As Table 1k illustrates, the University of Illinois remained the leader in total number of non-federal MDs in both 1975 and 1985 as well as for total numbers of Primary Care physicians and Primary Care physicians in Office Based practice. In 1975 three schools exceeded the University of Illinois (45.4%) in percent proportion of graduates in Primary Care: Indiana University (47.3%), University of Minnesota (47.5%), and the University of Tennessee (46.0%). In 1985, only the University of Minnesota (50.6%) surpassed the University of Illinois (46.4%) in percent proportion of graduates in Primary Care. Although rank orders shifted over the 10-year period, the list of schools responsible for the largest numbers of total non-federal MDs remained unchanged in 1975 and 1985 except for University of Pennsylvania (1975), which was replaced in the 1985 listing by SUNY (Brooklyn).

Table A-5 Series also indicate that there were 9,734 non-federal female physician graduates from US Active Schools in Primary Care in 1975 or 7.7 percent of the 126,368 non-federal Primary Care physicians from US Active Schools. In 1985, however, the female percent representation had grown to 16.7 percent or 30,737 MDs out of a total non-federal Primary Care stock of 183,751 physicians from US Active Schools. These data represent an increase of 21,003 female physicians for a growth of 215.8 percent. Statistics for male and female representation in Primary Care Office Based practice between 1975–1985 remained fairly stable. Approximately two-thirds of the physicians in Primary Care Office Based practice from US Active Schools were male in both 1975 (66.3%) and 1985 (67.5%) — exceeding the national average of Office Based Primary Care MDs both years — 63.8 percent (1975) and 64.4 percent (1985). Figure 4 depicts Primary Care statistics by sex for 1975 and 1985 for US Active School graduates. An analysis of Table A-5 Series also indicates that, in 1975, of total female graduates from US Active Schools (19,809), almost one-half (49.1%) were in Primary Care (9,734 MDs). Nearly 45 percent of this total (4,366 MDs) were in Primary Care Office Based settings. Ten years later, US Active Schools had produced 53,797 female MDs, 57.1 percent of whom were in Primary Care, with Office Based practice accounting for 14,783 physicians or nearly one-fourth (27.5%) of the total US Active School female physician cohort and 48.1 percent of US Active School female graduates in Primary Care.

MSA Characteristics - 1985

This section provides a variety of statistics on the 125 Active Medical Schools with living graduates as of December 31, 1985. Also included are data on US Inactive, Canadian, and Foreign Medical Schools as of year-end 1985. Table B-1 — B-3 Series, intended as summary orientation to the more detailed data that follow, present distributions by federal and non-federal employment, year of graduation, sex and age for graduates from each of the 125 schools. Table B-4 Series provide summary data by selected year-of-graduation intervals, and activity in the categories of All Schools, US Active Schools (Public and Private), Inactive, Canadian, and Foreign Schools. Table B-5 Series distribute individual US Active Medical Schools by these same variables. Table B-6 Series display specialty and year of graduation data by school category while Table B-8 Series do so for specialty and activity.

In Table B-7 and B-9 Series detail statistics are provided for individual US Active Schools by specialty and year of graduation (Table B-7) and by specialty and activity (Table B-9). Board certification status and specialty data are given in the Table B-10 Series for graduates by school category (All Schools, US Active Schools, Foreign Schools, etc.). Table B-11, a summary table for Table B-12 Series, indicates whether graduates from individual US Active Schools are board certified or not board certified. In the Table B-12 Series the board certification status for graduates of individual US Active Medical Schools is distributed by the 38 specialties. **In these tables, board certification status does not necessarily correspond to the specialty as listed.** As indicated in the *Reference Material and Definition Section* the category **board certified** includes (1) certified *only* by the board corresponding to a physician's primary specialty (2) certified by the corresponding board and other board(s) or (3) certified by a non-corresponding board.

Federal and Non-Federal Employment
(Table B-1)

In Table B-1, counts for the 125 US Active Schools, as well as aggregate counts for Inactive, Canadian and Foreign Schools, are distributed for federal and non-federal employment as of year-end 1985. In 1985, only four out of the 125 US Active Medical Schools showed percentages below 90 percent for graduates in non-federal employment: Oral Roberts University (89.8%), University of Texas at San Antonio (89.1%), Eastern Virginia Medical School (86.0%), and Uniformed Services University (32.8%). In absolute counts, 20 schools accounted for slightly more than one-fourth (26.2%) of all physicians in non-federal service. These 20 schools, comprised of 10 Private and 10 Public institutions, are ranked for size in Table 2a with proportionate percentage representations based on Private and Public School totals for non-federal physicians from each school.

Country and Year of Graduation
(Table B-2)

In 1985 Foreign Schools accounted for slightly over one-fifth (21.5%) of the total physicians in US medicine while US Active Schools represented slightly more than three-fourths (76.8%). Of the total physicians in US medicine in 1985 who graduated in the 1960s, approximately one-third (33.7%) were foreign medical graduates (FMGs). For physicians who graduated in the 1950s, the FMG representation was about one-fourth (25.4%). These high proportions were in large part the result of favorable immigration laws and legislative initiatives that encouraged the influx of FMGs into US medicine as physician shortages were projected and perceived at mid century.[1] Table 2b also includes additional statistics for both Private and Public Schools from *Prior to 1930 through 1985*.

Table 2b reveals that of all US Active School Graduates in US medicine in 1985 who received their MD degrees in the 1950s or later, one-half or more in each graduation interim were from Public Schools. Private Schools accounted for the majority of US Active physicians in 1985 who graduated in the 1940s (53.9%), 1930s (57.0%) and in the *Prior to 1930* interim (59.4%). The proportions of Foreign, Canadian, and US Active School graduates in American medicine in 1985 who graduated in the 1970s were largely symmetrical — 25-30 percent of physicians in each group (Table 2c).

Table 2c further demonstrates that the 1970s comprised the highest proportions of graduates for all phy-

Source: Table B-2

sician groups except for MDs from Inactive Schools, whose graduation years dominated prior to 1950 and FMGs, who showed highest percent of graduates (32.6%) in the 1960s. Table 2d lists those Private and Public Schools with highest percents of living graduates as of 1985.

As Table 2d illustrates 10 Private Schools in 1985 accounted for slightly over one-third (35.8%) of all 190,782 MDs from Private Schools. Similarly, 10 Public Schools comprised approximately one-third (32.4%) of the total Public School count of 233,563 physicians the same year.

Age and Sex *(Table B-3 Series)*

US Medical Schools may be studied for age and sex variables in a comparative context that includes both Foreign and Canadian Schools. As Table 2e indicates, approximately one-fifth of all US physicians in 1985 were FMGs. Foreign Schools showed the highest representation in the 45-54 group — 30.7 percent — while the lowest proportions, at near parity, were indicated for MDs 65 and over (12.6%) and under 35 (12.8%). Although US Schools accounted for two-thirds or more of MDs in each age interval, the largest proportion was indicated for the under 35 group (86.4%) and the lowest for physicians between 45–54. Of all male MDs in US medicine in 1985, one-fifth were FMGs with the highest representation indicated for the 45-54 group (27.8%). Female physicians from Foreign Schools comprised nearly 30 percent of all female MDs for the year. *The most dramatic contrast between percent proportions of female FMGs and female USMGs occurred in the under 35 group — 12.9 percent versus 86.3 percent.* Only in the 45–54 group did female FMGs clearly dominate, where they comprised 57.0 percent of all female physicians in US medicine.

Table 2f indicates that although in 1985 women represented only 13.1 percent of all physicians from US Active Schools, their representation in the under 35 group was significantly the highest among the age intervals — *nearly one-fourth* (24.2%) — to substantiate further the growing numbers of women physicians in US medicine. Their lowest representations occurred in the 45-54 interval (6.1%) and in the 55–64 group (6.2%).

Source: Table B-3 Series

Table 2g continues the age and sex profile with a more detailed distribution that includes both Public and Private US Active Schools. In 1985, the highest representation of US Active School graduates from Private Schools was indicated for the 65 and over group — 54.9 percent — while Public Schools were best represented in the under 35 group — accounting for 6-in-10 of all graduates. In the same year, based on the total male/female physician cohort from US Active Schools, male and female graduates from Public Schools were at near parallel proportions — 55.1 percent (male) and 54.8 percent (female).

As Table 2g also demonstrates, Public Schools accounted for the largest share of all women MDs under 35 (58.1%) and in the 35–44 interval (55.7%) while Private Schools accounted for over one-half of all female physicians from US Active Schools in all other age groups.

In 1975, women physicians (all schools) comprised only 9.1 percent of the total physician population of 393,742 MDs.[2] By 1985, however, their numbers had increased by 45,089 to represent nearly 15 percent of all physicians for the year, or 80,725 MDs of a total physician force of 552,716. Representing a percent growth of 127 percent in a decade, women physicians will predictably continue to be a target of interest and research, in their specialty choices, location patterns, and activity selections, as will their countries and schools of graduation.

Figure 5 displays the five highest Private and Public US Active Schools ranked for numbers of female graduates as of year-end 1985. The five Private Schools

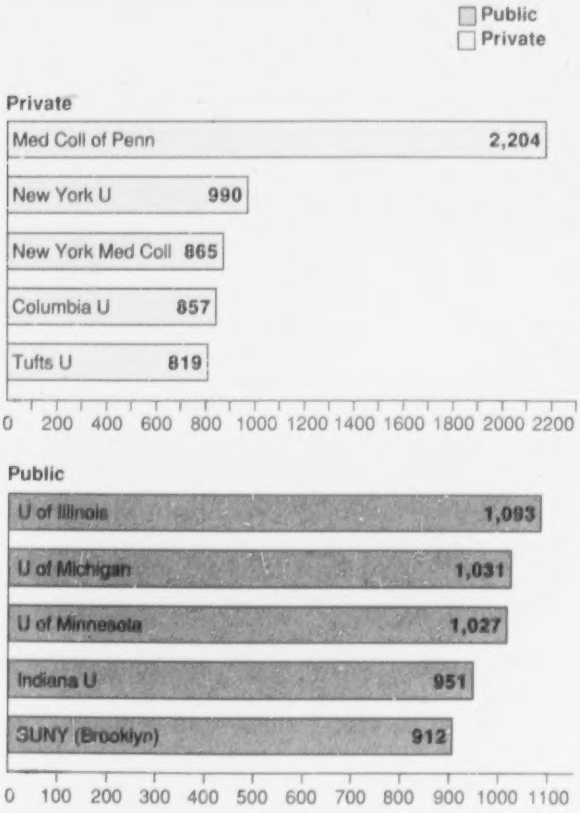
FIGURE 5
Private and Public Medical Schools with Highest Counts of Female Graduates, December 31, 1985



Source: Table B-3 Series

charted in Figure 5 accounted for slightly more than one-fifth (22.8%) of all female graduates (25,171) from Private Schools as of year-end 1985, while the 5,014 female graduates from the five Public Schools in Figure 5 represented 16.4 percent of the Public School female graduate total of 30,542.

Activity and Year of Graduation
(Table B-4 and B-5 Series)

As indicated earlier, Table B-4 Series provide an overview for the detail statistics in the Table B-5 Series, where each US Active School with living graduates is tabulated for activity and year of graduation distributions. An analysis of Table B-4 reveals that Patient Care was the overwhelming choice of graduates from US Active Public (84.3%) and Private (78.6%) Schools in 1985 as well as for graduates from Canadian (73.0%) and Foreign (80.2%) Schools. This dramatic choice of activity is also evident for each of the graduation intervals in the category All Schools except *Prior to 1930* (15.2%) and *1930-1939*, where the Inactive category, which includes retired and semi-retired MDs, shows significantly higher percent representations than is the case with the other graduation categories—76.3 percent (*Prior to 1930*) and 50.8 percent (*1930–1939*).

Within Patient Care, physicians from both Public and Private Schools overwhelmingly preferred Office Based practice as their major professional activity — approximately three-fourths of all Patient Care MDs from Private Schools (75.8%) and Public Schools (73.5%). Office Based practice also dominated as the Patient Care option across the year-of-graduation continuum for graduates of both Public and Private Schools. The only exception was the 1980–1985 interim, where physicians in residency training programs are predictably represented in high proportions — 95 percent of all Hospital Based physicians. Table 2h displays the percent of physicians in both Office Based and Hospital Based practice in each of the graduation intervals.

A study of Table B-4 further indicates that in 1985, within Non-Patient Care activities (e.g., Other Profes-

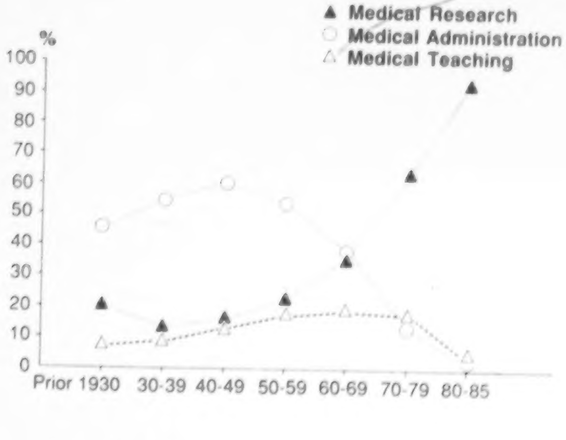
Source: Table B-4 Series

sional Activity), Medical Research was the dominant choice of all physicians regardless of school of graduation (48.2%) and that both Public and Private Schools approximated this proportion with researchers representing 44.0 percent and 46.7 percent of all their respective graduates in Non-Patient Care activities. These proportions, however, were surpassed by FMGs in Medical Research who, in 1985, accounted for 59.0 percent of all FMGs in Non-Patient Care activities.

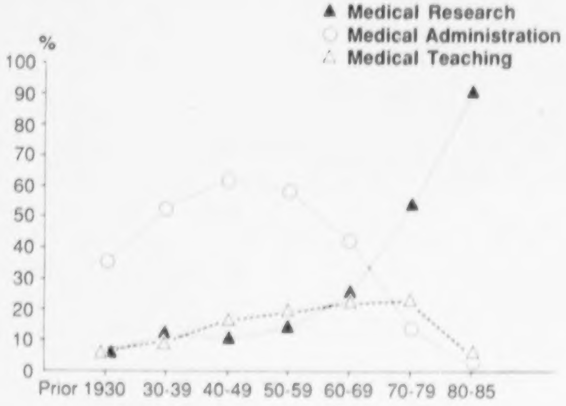
Within the graduation continuum, the 1980–1985 category had the highest representation for Medical Research in each of the school categories (e.g., US Schools, Canadian, Foreign, etc.). Administration was the choice of approximately 3-in-10 MDs in Non-Patient Care activities from Private (32.2%), Public (30.3%) and Canadian Schools (31.0%). Administrators from Foreign Schools, however, comprised only 17.8 percent of all FMGs in Non-Patient care. Administration consistently represented the highest proportion of total Non-Patient Care MD graduates for 1940–1949 — approximately 60 percent for US Active Public and Private Schools and Canadian Schools. FMG administrators, however, were represented at 40 percent of all FMGs in Non-Patient Care activities in the same interim. Figures 6 and 7 chart the distribution of total graduates from Private and Public Schools in Medical Research, Administration, and Medical Teaching across the graduation intervals from *Prior to 1930 through 1985*.

FIGURE 6
Percent of **Private** Medical School Graduates in Other Professional Activity for Selected Graduation Intervals, December 31, 1985



Source: Table B-4 Series

FIGURE 7
Percent of **Public** Medical School Graduates in Other Professional Activity for Selected Graduation Intervals, December 31, 1985

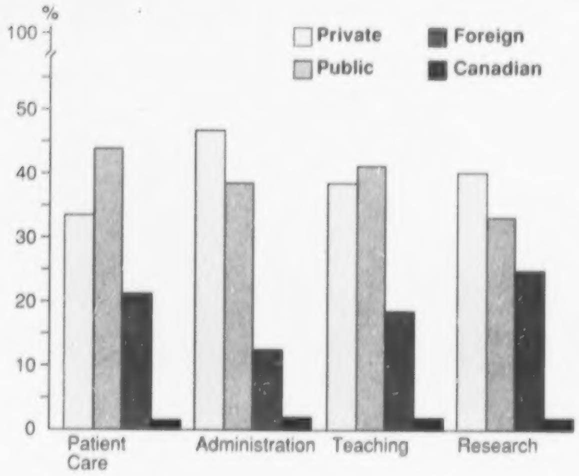


Source: Table B-4 Series

Figure 8 reveals that the Public Schools exceeded the Private Schools in their contribution to the pool of total Patient Care MDs for the nation by 10.5 percent in 1985 while Foreign Schools produced approximately one-fifth (21.2%) of all physicians in Patient Care the same year. In Medical Administration, Private Schools showed an 8.2 percent higher share of physicians. FMGs were represented by approximately 13 percent, and Canadian MDs by 2.0 percent. Public and Private Schools were at near parity in accounting for 80 percent of all professorial appointments — 38.5 percent (Private) and 41.2 percent (Public). FMGs were most highly represented in Research, comprising nearly one-fourth (24.8%) of the nation's medical researchers in 1985. In the same year, Public Schools accounted for one-third of the research pool while Private Schools constituted the largest representation — 40.2 percent.

Within the universe of US Active Schools, *the majority of Patient Care MDs in US medicine were graduates of Public Schools as of December 31, 1985.* Public Schools also had a slightly higher share of US Active School graduates in Medical Teaching — Private (48.4%) versus Public (51.6%). Private Schools however exceeded Public Schools with 54.9 percent of the administrators and 54.8 percent of the physicians in Medical Research. Table 2i elaborates upon these statistics with distributions across the year of graduation continuum. While Private Schools accounted for

FIGURE 8
School of Graduation* by Patient Care and Non-Patient Care Activity, December 31, 1985



Source: Table B-4 Series

*Excludes Inactive Schools

the majority of Patient Care physicians who graduated from US Active Schools Prior to 1930 through the 1940s, Public Schools have done so since the 1950s, with approximately one-half (51.2%) indicated for the 1950s and over 60 percent for the 1980–1985 graduation interval.

Of the total number of administrators in US medicine in 1985 who graduated Prior to 1930, over two-thirds (68.7%) were from Private Schools. Private Schools continued to demonstrate a clear majority among the graduation categories through the 1960s. A similar pattern is indicated for the distribution of physicians in Medical Teaching. Private Schools produced the highest percentage of physicians with professorial appointments who graduated Prior to 1930 through the 1960s — from 6-in-10 of the Prior to 1930 group to 5-in-10 of those in Medical Teaching who received their MD degrees in the 1960s. More than 8-in-10 of all Medical Researchers from US Active Schools who graduated Prior to 1930 were Private School graduates as of year-end 1985. Private Schools accounted for the clear majority of researchers across the graduation year continuum except for 1980–1985 where Public Schools accounted for slightly more than one-half — 53.8 percent.

Specialty and Year of Graduation
(Table B-6 and B-7 Series)

Table B-6 Series provides a summary overview for the Table B-7 Series that include a separate tabulation for each US Medical School by specialty and year of graduation. In 1985, five specialties accounted for slightly over 40 percent (42.7%) of all physicians in US medicine: Internal Medicine (16.4%), Family Practice (7.2%), General Surgery (6.9%), Pediatrics (6.4%), and Psychiatry (5.8%). Table 2j displays the five highest specialties for Private Schools and those for Public Schools as well as their percent distributions across the year-of-graduation continuum. These five highest specialties accounted for 43.0 percent of all graduates from Private Schools and 44.5 percent of physicians who graduated from Public Schools.

As Table 2j demonstrates, for Private Schools, Internal Medicine and General Surgery were most highly represented by graduates in the 1980–1985 interim (31.4% and 26.7% respectively). Conversely, nearly 30 percent of Pediatricians from Private Schools graduated in the 1970s, to represent the highest proportion for the discipline among the graduation intervals. Psychiatrists who graduated from Private Schools showed near even distribution from the 1960s (25.1%) and 1970s (25.0%). Of all Obstetricians/Gynecologists, the highest proportion — nearly one-fourth — were indicated for the 1970–1979 graduation interval.

Internists from Public Schools, like those from Private Schools, dominated in the 1980–1985 graduation interval. Among the remaining four specialties ranked for size in the Public School set, Family Practice (36.6%), Pediatrics (33.7%), and Obstetrics/Gynecology (30.0%) were most highly represented by physicians who graduated in the 1970s. In contrast, slightly more than one-third (34.4%) of all General Surgeons from Public Schools graduated between 1980–1985.

TABLE 2j - Five Highest Specialties Ranked by Size for Physicians from Private and Public U.S. Active Schools, and Year of Graduation, December 31, 1985

Activity and Specialty
(Table B-8 and B-9 Series)

Table B-8 Series present summary data by specialty and activity for All Schools, US Active Schools (both Public and Private) as well as for US Inactive, Canadian, and Foreign Schools. Table B-9 Series, in turn, provide detail statistics for each of the 125 US Active Schools with living graduates through a cross-tabulation of specialty and activity data. As an analysis of Table B-8 Series reveals, in 1985 ten specialties accounted for 63.6 percent of all physicians who graduated from US Active Schools — 269,676 MDs out of a total count of 424,345. As Table 2k below indicates, physicians in these ten specialties, which also included the Primary Care Specialties of Internal Medicine, Family Practice, General Practice, Pediatrics, and Obstetrics/Gynecology, were overwhelmingly engaged in Patient Care delivery of services — nearly 90 percent or more in all disciplines except Psychiatry (88.9%), Pediatrics (88.6%), and Internal Medicine (86.9%). Within Patient Care, Office Based practice was the clear preference in each case with Office Based General Practitioners demonstrating the highest proportion of physicians (93.5%) among the ten disciplines and Office Based Internists (58.7%), the lowest. The specialties among the ten that comprised the highest percents in Non-Patient Care included: Internal Medicine (13.2%), Pediatrics (11.4%), and Psychiatry (11.1%).

In the same year, as Figure 9 illustrates, US Active Schools produced 62,256 Residents or 82.6 percent of total Residents from all schools while Foreign Schools accounted for 17.0 percent of all physicians in residency training programs or 12,837 physicians. Of these 62,256 Residents, one-fourth (25.1%) were in Internal Medicine. Together with Internal Medicine the spe-

cialties of General Surgery (12.7%), Family Practice (9.8%), and Pediatrics (7.5%) accounted for the majority (55.1%) of all Residents from US Active Schools.

Figure 10 reveals further that Public Schools produced 38,089 Residents or 61.2 percent of all physicians in residency training from the US Active Schools while the Private School count was 24,167 (38.8%). Figure 10 also demonstrates that the four specialties listed above for total US Active Schools — Internal Medicine, General Surgery, Family Practice, and Pediatrics — were also dominant choices for graduates from both the Public and Private Schools in residency training programs but in different proportions. These four specialties cumulatively accounted for 54.4 percent of all Residents from the Public Schools and 56.0 percent of all Residents from the Private Schools. Further, Figure 10 separately depicts the proportionate percent representations of these specialties for graduates of Public and Private Schools.

An analysis of Table B-8 Series reveals that FMGs in residency programs (12,837) also preferred the specialties of Internal Medicine (27.6%), General Surgery (9.3%), and Pediatrics (12.4%). With Psychiatry (11.0%), these highest specialties accounted for 60.3 percent of all FMGs in residency training in 1985.

Board Certification
(Table B-10 Series, B-11, B-12 Series)

As indicated in the *Reference Material and Definitions* section of this publication, board certification represents a voluntary effort on the part of the physician. The licensed physician may practice any specialty regardless of board certification status. *Tables in this publication indicate board certification status only as certified and not certified.* The category **board certified** includes (1) certified *only* by the board corresponding to the specialty listed (2) certified by the corresponding board and other board(s) or (3) certified by a non-corresponding board. A study of Table B-10 Series indicates that 57.6 percent of all physicians from US Active Schools were board certified in 1985. It also reveals, for example, that of all US Active School graduates in Obstetrics/Gynecology 59.4 percent were board certified. This statistic includes not only those physicians certified only by the Board of Obstetrics and Gynecology (e.g., corresponding board) but conceivably those certified by the Board of Obstetrics and Gynecology and the Board of Pediatrics (e.g., corresponding and non-corresponding board). The statistic may also include those certified by a board like the Board of Radiology that does not correspond to the discipline a physician indicates as a primary specialty, in this case the specialty of Obstetrics and Gynecology.

Given these caveats, Table B-10 Series, which provides summary data on specialty and board certification status of graduates by school category (All Schools, US Active Schools, Foreign Schools, etc.), reveal that in 1985 three-fourths or more of US Active School graduates in five specialties were board certified (Table 21). An analysis of Table B-10 Series also indicates that physicians in six specialties accounted for nearly one-half (48.4%) of the 244,439 certified physicians who graduated from US Active Schools: Internal Medicine (15.8%), Family Practice (8.8%), General Surgery (6.7%), Pediatrics (6.3%), Obstetrics/Gynecology (5.8%), and Psychiatry (5.0%).

The proportion of board certified physicians out of total Public and Private School graduates showed a small margin of difference — 55.9 percent and 59.6 percent respectively. Canadian certified physicians comprised slightly over one-half (52.1%) of all Canadian physicians in the US while 39.1 percent of all FMGs were board certified. Figure 11 illustrates the percent distribution of total board certified physicians in US medicine (All Schools) in 1985 by school of graduation category.

Table B-11 lists out the board certification status for each Public and Private US Active School as well

TABLE 2l - Fifteen Highest Specialties with Percents of Board Certified* Physicians who Graduated from U.S. Active Schools, December 31, 1985

*Percents May Not Add Due to Rounding

as for the categories of Foreign, Canadian, and Inactive Schools. As indicated earlier, **board certified** denotes certified by a board corresponding to a physician's primary specialty *only*, a corresponding board *and* non-corresponding board(s), or a non-corresponding board. Of the 125 US Active Schools with living graduates in 1985, Public Schools accounted for 60.8 percent or 76 schools while Private Schools accounted for 39.2 percent or 49 schools. In 1985, the 10 highest Public and Private Schools ranked for board certified graduates showed that approximately 60–70 percent of their graduates were board certified physicians. (Table 2m)

The detail statistics in Table B-12 Series provide specialty distributions for graduates from each of the 125 US Active Schools with living graduates as well as aggregated data for Foreign, Canadian, and Inactive Schools. As explained above, data are presented by the board certification status of certified and not-certified.

MSA Geographic Data—1985

This edition of *Medical School Alumni* does not attempt to study the diffusion or migratory patterns of physicians in the United States nor to forecast developments for the future, although it is recognized that such analytic and research efforts do exist and have addressed the issue with correlations to market mechanisms. Rather, the location data in this section is presented in response to requests for baseline information on physician mobility and retention statistics without interpretation as to cause. Although it is recognized that a variety of factors may influence a physician's location decision, a definitive relationship between state of graduation and state of practice is difficult to determine. Among the determinants of physician location choice suggested by empirical research and theory are community of origin, medical education experience (e.g., location of medical school and residency training), hospital facilities, socio-cultural and environmental conditions, area per capita income, among others.[1] Nevertheless, the percent of all US Active Medical School graduates located in the same states as those of their medical education have remained virtually unchanged for more than a decade. *The 1975 edition of Medical School Alumni* reported that as of year-end 1973, 40.5 percent of all Active Medical School graduates were located in their state of graduation.[2] In 1985, the percent was 40.4 percent (Table C-1), to suggest that a relationship between state of graduation and location does exist. It is anticipated that the geographic data in this volume will be resourceful in further researching such relationships and in determining medical education guidelines and health program options that complement policy related research.

The geographic data in this section include distributions on school of graduation by state of location (Table C-1) as well as the relation between production of physicians by individual states and the number of graduates from a state who are practicing in the same state (Table C-2). Table C-3 provides a cross-tabulation of ALL physicians located in a given state with the number of graduates from US Active Schools in-state who have located their practices in the same state. In Table C-4 the numbers of physicians in practice are distributed by school (and state) of graduation and state of residency training. Data for state of location in Table C-1 and state of residency training in Table C-4 are distributed in categories of *same state, contiguous states* and *Other US States and Possessions*. A complete listing of contiguous states for each state in the US (except Alaska and Hawaii) is found in Appendix C-2. Detail statistics are provided in the Table C-5 Series, where individual US Active Schools are cross-tabulated for year of graduation and state of location data. This table also provides for Inactive, Foreign, and Canadian Schools by category with these same variables.

School of Graduation and State of Location *(Table C-1)*

While in 1985 approximately 4-in-10 of all US Active School graduates practiced in the same state in which they received their MD degrees, retention rates varied considerably by state and school. The University of California (Irvine) demonstrated the highest retention rate with 85.5 percent of all graduates practicing in the state. California schools comprised the four top institutions registering highest percents of MDs practicing in the same state where they received their medical degrees. In addition to the University of California (Irvine) three additional California schools demonstrated high percentages of retention: University of Southern California (SF), 74.6 percent, University of California (LA), 73.2 percent, and University of California (Davis), 70.9 percent.

Public Schools as a group exceeded Private Schools in the percent proportion of MDs located in the same state as that of their medical education: Public Schools (47.5%) vs Private Schools (31.6%). Also in 1985, only five of the 49 Private Schools registered one-half or more physicians practicing in the same state as that of their medical education. These schools included: the University of Southern California (LA) (80.2%), Stanford University (65.5%), Loma Linda University (55.5%), Baylor College of Medicine (53.9%), and Ponce Medical School (51.2%). Public Schools with one-half or more of all graduates in the same state as that of their medical education, however, numbered 28 to account for over one-third (36.8%) of the 76 Public Medical Schools in the US. Table 3a lists these Schools in rank order by percent proportions.

A further analysis of Table C-1 reveals that Private Schools exceeded Public Schools in the proportion of graduates practicing in States other than those of their medical education or contiguous states (e.g., Other US States and Possessions). While approximately one-half (51.9%) of all Private School graduates in 1985 were located in states other than those of their medical schools or states contiguous to them, approximately 40 percent (38.7%) of Public School graduates were so located.

Source: Table C-1

Nine Private Schools registered approximately 70 percent or more of their graduates located in Other US States and Possessions. These included: Georgetown University (75.9%), George Washington University (73.7%), University of Chicago/Pritzker (72.8%), Creighton University (71.2%), Johns Hopkins University (70.7%), Dartmouth Medical School (70.2%), Meharry Medical College (69.4%), Chicago Medical School (69.1%), and St. Louis University (68.1%). These schools cumulatively accounted for 25,298 physicians or one-fourth (25.6%) of all physicians from Private Schools located in states that excluded those of their medical education or those contiguous to them.

Although, among the Public Schools, only Uniformed Services University (71.6%) registered approximately 70 percent of graduates located in states other than that of graduation or states contiguous to the graduation state, eleven Public Schools showed approximately one-half or more of their graduates located in states in the Other States and Possession category. These states included: University of Hawaii (56.0%), University of Vermont (56.0%), University of Michigan (54.1%), University of Nebraska (53.1%), University of Iowa (51.0%), University of Cincinnati (50.4%), University of Colorado (50.3%), University of Virginia (49.4%), University of Florida (49.1%), Michigan State University (48.7%), and University of New Mexico (48.1%). These schools cumulatively represented slightly more than one-fifth (22.6%) of all Public School graduates located in states other than those of their graduation state or states contiguous to it.

In only eleven instances did the percent of physicians located in contiguous states and Other US States and Possessions exceed the percent of MDs located in the same state of their medical education. Predictably, three of these schools — George Washington University, Georgetown University, and Howard University — are located in D.C. while four are in New England: Dartmouth Medical School, Brown University, University of Vermont, and Yale University.

The percent proportions of MDs in the same state, contiguous states, and Other US and Possessions for these schools, as well as statistics for the remaining schools in this category, are listed in Table 3b.

State of Graduation and In-State Location *(Table C-2)*

As the structure of health care delivery becomes more diverse and complex, physician retention and mobility statistics will continue to influence policy development and program planning. As indicated earlier, this volume recognizes that determinants for the geographic distribution of physicians are predicated on a constellation of important influences that include (but are not limited to) community origins and medical education experience. Table C-2 provides statistics on the number of physicians who graduated from US Active Schools in each of the 44 states that have a medical school as well as D.C., and Puerto Rico as of year-end 1985. Also indicated is the number of graduates from each state who were located in the same state as that of their medical education at year-end 1985.

As Table C-2 indicates, one-half or more of all graduates of US Active Medical Schools in eight states and Puerto Rico were practicing in the same state as that of their medical education. These states included: Alabama (55.3%), Arkansas (52.2%), California (71.4%), Indiana (50.1%), Mississippi (51.3%), Oklahoma (50.1%), Puerto Rico (63.3%), South Carolina (54.4%), and Texas (63.3%). In 1985, graduates of schools in **Ten States Ranked by Highest Number of Graduates** accounted for nearly 6-in-10 (58.2% or 246,902 MDs) of the total US Active School graduate population of 424,345 from Active US Medical Schools. These states of graduation with percent of graduates located in the same state included: California (71.4%), D.C. (8.6%), Illinois (32.2%), Massachusetts (32.1%), Michigan (44.6%), Missouri (25.9%), New York (39.2%), Ohio (42.7%), Pennsylvania (38.4%), and Texas (63.3%). Figure 12 charts the percent retention of graduate for each of the 44 states with a medical school, D.C., and Puerto Rico.

State of Location and In-State Graduation *(Table C-3)*

Table C-3 approaches the location of physicians from a slightly different perspective than does Table C-2. While Table C-2 distributes physicians on the basis of the numbers graduated from US Active Schools in each state, Table C-3 begins with the numbers of US Active School Graduates (All Schools) nationwide who were located in each state as of December 31, 1985. The number of graduates from all US Active Medical Schools who were located in a given state are then viewed in relation to the number of the state's Active School graduates who were residing in the state as of year-end 1985.

*Indicates state does not have a US Active Medical School

In 1985, nearly one-half or more of all US Active School Graduates in each of 16 states received their MD degrees in-state. Within this group five states and Puerto Rico registered proportions exceeding 60 percent: Puerto Rico (75.3%), Nebraska (74.2%), Louisiana (69.5%), Illinois (62.4%), Pennsylvania (62.2%), Arkansas (60.3%). Conversely six states showing the lowest percent proportions of graduates out of total US Active School graduates in the state included: New Mexico and Connecticut (12.6%) each, Arizona (7.6%), Rhode Island (6.3%), Nevada (5.6%), and New Hampshire (4.0%). An analysis of Table C-3 further demonstrates that ten states accounted for over one-half (54.6%) of total physicians from US Active Medical Schools or 230,388 MDs out of 421,662 (excluding those located in Possessions or with unknown addresses). The physician population in each of these states in relation to the number of graduates of each state's Active Schools retained in-state are provided in Table 3c. Within the ten states ranked for size of the total

*Indicates state does not have a US Active Medical School

US Active Medical School Graduate complement in Table 3c, Illinois (62.4%) and Pennsylvania (62.2%) revealed the highest proportion of state graduates. Figure 13 reveals the percent of each state's graduates out of total US Active School Graduates located in each state as of December 31, 1985.

State of Graduation and State of Residency Training *(Table C-4)*

Table C-4 displays state of residency training for US Active School graduates who, as of December 31, 1985 were in practice or other classifications *but not in residency training* (see *Reference Section* for definition of residency training). All of the US Active Schools (includes Puerto Rican Schools) that awarded the MD degree as of year-end 1985 are represented in Table C-4 *except* Morehouse College School of Medicine, whose total graduates as of December 31, 1985 were in residency training programs (see Table A-4). In Table C-4, state of residency is defined as (1) **same as state of graduation** (2) **states contiguous to that of graduation**, and (3) **other US states**. If the state of residency training was not indicated on the AMA Masterfile, the designation for state is given in the table as **Unknown**. Table 3d provides summary data on US Active School graduates to facilitate analysis of Table C-4. As Table 3d illustrates, total graduates from US Active Schools in 1985 numbered 424,345 physicians. Of this count, 362,089 were in practice, Not Classified, Inactive, or were physicians with unknown addresses. Over 62,000 were in graduate medical education (GME) programs in 1985. Table 3d further delineates that the AMA Physician Masterfile as of year-end 1985 had GME infor-

Source: Table C-4

mation for 354,652 MDs of the total 362,089 graduates in practice or with other classifications. Table 3d also provides separate sets of statistics for Public and Private US Active Medical Schools.

Of the 190,739 graduates of Public Schools in practice or other classification (*excludes Residents 1985*) for whom AMA had GME data in 1985, 51.4 percent had been in residency training programs in their graduation state, 12.6 percent in programs in states contiguous to the graduation state, and over one-third (36.0%) in GME programs in other states. Statistics for the Private Schools reveal similar percent distributions: 47.4 percent (same state), 13.7 percent (contiguous states), and 38.9 percent (Other States). Given the caveats explained above and the definition of residency training upon which these data are based, Table 3e ranks the Private Schools showing approximately one-half or more of graduates who had done residency training in the same state as that of their graduation. As Table 3e demonstrates nearly 50 percent or more of in graduates from 22 of the 48 Private Schools listed (48.5%) had been in residency training programs in the same state of their graduation. The retention percentages for these schools ranged from 75.2 percent of graduates indicated for the University of Southern California (LA) to 48.5 percent for graduates of St. Louis University.

Table 3f lists 48 of the 76 Public Schools (63.2%) whose graduates in practice or other classifications as of year-end 1985 (*excludes Residents 1985*) had done residency training in the same state as that of their graduation. California, Texas, and Ohio medical schools comprised the highest ten schools on the list with retention rates from 63.6 percent (U of Texas, San Antonio) to 76.8 percent (U of California, Irvine). Five schools comprised the lower end of the spectrum for the high group with retention rates ranging from 49.8 percent (U of Oklahoma) to 48.9 percent (Med Coll of South Carolina).

State of Location and Year of Graduation *(Table C-5 Series)*

Table C-5 Series present detail statistics for each of the 125 Active US Medical Schools with living graduates as of December 31, 1985 and for Inactive, Canadian, and Foreign Schools by category. Graduates from each of the 125 schools (designated as Public or Private) are distributed by their location in each of the 50 states, D.C., and Puerto Rico and by selected 10-year intervals of graduation (except for 1980-1985) from Prior

1930 through 1985. These data are useful not only in studying the location choices of a school's graduates over time but in further researching a school's contribution to manpower needs in given geographic areas. As indicated in the *Reference Material and Definitions Section*, (1) year of graduation is based on a calendar year rather than an academic year and (2) caution should be exercised in interpreting these data as they reflect only the current characteristics of MDs who were alive as of December 31, 1985.

** IN 1975, TEMPLE UNIVERSITY, PENNSYLVANIA STATE UNIVERSITY, AND THE UNIVERSITY OF PITTSBURGH WERE PRIVATE SCHOOLS. IN 1985, THEY WERE STATE-SUPPORTED BUT NOT STATE-OWNED. HOWEVER, THEY ARE DESIGNATED HERE AS PUBLIC. THE UNIVERSITY OF LOUISVILLE IN 1975 WAS PRIVATE; BY 1985 IT HAD CHANGED ITS STATUS TO PUBLIC.

NOTE: EIGHTEEN MEDICAL SCHOOLS SHOWING DATA FOR 1985 WERE EITHER NOT IN EXISTENCE IN 1975 OR HAD NOT AS YET AWARDED THE M.D. DEGREE. THESE SCHOOLS, THEREFORE, THOUGH LISTED, DO NOT SHOW DISTRIBUTIONS FOR 1975.

Notes:

—Not Applicable. M.D. degrees not awarded or school not organized.

[1] Data in this table are based on a school year, while data in all other tables are based on a calendar year.

[2] In 1962, 2,695 graduates of the Los Angeles College of Osteopathic Physicians and Surgeons were granted M.D. degrees upon a successful completion of a qualifying exam by the University of California School of Medicine at Irvine. These physicians are not included in this table.

[3] As of July 1, 1986 New Jersey Medical School (Rutgers) changed its name to Robert Wood Johnson Medical School.

[4] University of Texas (Dallas) appears in the annual Medical Education issues of JAMA as University of Texas Southwestern Medical School at Dallas.

A	Allergy		
AM	Aerospace Medicine		
AN	Anesthesiology		
CD	Cardiovascular Diseases		
CHP	Child Psychiatry		
CRS	Colon and Rectal Surgery		
D	Dermatology		
DR	Diagnostic Radiology		
EM	Emergency Medicine		
FOP	Forensic Pathology		
GE	Gastroenterology		
GP	General Practice—Includes:		
		FP	Family Practice
		GP	General Practice
GPM	General Preventive Medicine		
GS	General Surgery—Includes:		
		ABS	Abdominal Surgery
		CDS	Cardiovascular Surgery
		GS	General Surgery
		HNS	Head and Neck Surgery
		HS	Hand Surgery
		PDS	Pediatric Surgery
		TRS	Traumatic Surgery
		VS	Vascular Surgery
IM	Internal Medicine—Includes:		
		AI	Allergy and Immunology
		DIA	Diabetes
		DLI	Diagnostic Laboratory Immunology
		END	Endocrinology
		GER	Geriatrics
		HEM	Hematology
		ID	Infectious Diseases
		IG	Immunology
		IM	Internal Medicine
		NEP	Nephrology
		NTR	Nutrition
		ON	Oncology
		RHU	Rheumatology
NS	Neurological Surgery		
N	Neurology—Includes:		
		CHN	Child Neurology
		N	Neurology
NM	Nuclear Medicine		
OBG	Obstetrics & Gynecology—Includes:		
		GO	Gynecological Oncology
		GYN	Gynecology
		MFM	Maternal & Fetal Medicine
		OBG	Obstetrics & Gynecology
		OBS	Obstetrics
		REN	Reproductive Endocrinology
OM	Occupational Medicine		
OPH	Ophthalmology		
ORS	Orthopedic Surgery		
OTO	Otolaryngology—Includes:		
		FPS	Facial Plastic Surgery, **OTO**
		OTO	Otolaryngology
PTH	Anatomic/Clinical Pathology—Includes:		
		ATP	Anatomic Pathology
		BLB	Bloodbanking
		CLP	Clinical Pathology
		CMP	Chemical Pathology
		DMP	Dermatopathology
		IP	Immunopathology
		MM	Medical Microbiology
		NA	Neuropathology
		PTH	Anatomic/Clinical Pathology
		RIP	Radioisotopic Pathology
PD	Pediatrics—Includes:		
		ADL	Adolescent Medicine
		NPM	Neonatal-Perinatal Medicine
		PD	Pediatrics
		PDE	Pediatrics, Endocrinology
		PHO	Pediatric Hematology-Oncology
		PNP	Pediatrics, Nephrology
PDA	Pediatric Allergy		
PDC	Pediatric Cardiology		
PM	Physical Medicine & Rehabilitation		
PS	Plastic Surgery—Includes:		
		PS	Plastic Surgery
P	Psychiatry—Includes:		
		P	Psychiatry
		PYA	Psychoanalysis
PH	Public Health		
PUD	Pulmonary Diseases		
R	Radiology—Includes:		
		NR	Nuclear Radiology
		PDR	Pediatric Radiology
		R	Radiology
TR	Therapeutic Radiology		
TS	Thoracic Surgery		
U	Urological Surgery		
OS	Other Specialty—Includes:		
		CCM	Critical Care Medicine
		LM	Legal Medicine
		OS	Other Specialty
		PA	Clinical Pharmacology
US	Unspecified

* Above listing gives the conversion of the 85 Self-Designated Practice Specialty Codes (as listed on the PPA questionnaire and on the *AMA Physician Masterfile*) into the 38 specialty Codes used for statistical purposes by the Association.

Appendix B-3

American Specialty Boards

AMERICAN BOARD OF:	CERTIFIES IN SPECIALTIES OF:
Allergy and Immunology	Allergy and Immunology, Diagnostic Laboratory Immunology
Anesthesiology	Anesthesiology, Critical Care Medicine
Colon and Rectal Surgery	Colon and Rectal Surgery
Dermatology	Dermatology, Dermatopathology, Dermatological Immunology, Diagnostic and Laboratory Immunology
Emergency Medicine	Emergency Medicine
Family Practice	Family Practice
Internal Medicine	Internal Medicine, Cardiovascular Disease, Critical Care Medicine, Diagnostic Laboratory Immunology, Endocrinology and Metabolism, Gastroenterology, Hematology, Infectious Disease, Medical Oncology, Nephrology, Pulmonary Disease, Rheumatology
Neurological Surgery	Neurological Surgery, Critical Care Medicine
Nuclear Medicine	Nuclear Medicine, Cooperates with American Board of Pathology and American Board of Radiology in Radioisotopic Pathology and Nuclear Radiology
Obstetrics and Gynecology	Obstetrics and Gynecology, Critical Care Medicine, Gynecologic Oncology, Maternal and Fetal Medicine, Reproductive Endocrinology
Ophthalmology	Ophthalmology
Orthopaedic Surgery	Orthopaedic Surgery
Otolaryngology	Otolaryngology
Pathology	Anatomic and Clinical Pathology, Anatomic Pathology, Clinical Pathology, Blood Banking, Chemical Pathology, Dermatopathology, Forensic Pathology, Hematology, Immunopathology, Medical Microbiology, Neuropathology, Radioisotopic Pathology
Pediatrics	Pediatrics, Diagnostic Laboratory Immunology, Pediatric Cardiology, Pediatric Critical Care Medicine, Pediatric Endocrinology, Pediatric Hemato-Oncology, Pediatric Nephrology, Pediatric Pulmonology, Neonatal-Perinatal Medicine
Physical Medicine and Rehabilitation	Physical Medicine and Rehabilitation
Plastic Surgery	Plastic Surgery
Preventive Medicine	Aerospace Medicine, Occupational Medicine, Public Health and General Preventive Medicine
Psychiatry and Neurology	Psychiatry, Neurology, Neurology with Special Qualifications in Child Neurology, Child Psychiatry, Critical Care Medicine
Radiology	Radiology, Diagnostic Radiology, Therapeutic Radiology, Nuclear Radiology
Surgery	Surgery, Pediatric Surgery, Surgical Critical Care, General Vascular Surgery
Thoracic Surgery	Thoracic Surgery
Urology	Urology

Appendix B-4

Major Professional Activity Classifications

Office Based Practice	Includes physicians engaged in seeing patients. Physicians may be in solo practice, in group practice or partnership or in arrangement with other physicians in non-group practice. Also includes physicians in patient services such as those provided by pathologists and radiologists.
Hospital Based Practice	Includes physicians in non-government or government hospitals.
Residents—All Years	Includes any physician in supervised practice of medicine among patients in a hospital or in its out-patient department with continued instruction in the science and art of medicine by the staff of the facility. Also includes any physician in advanced training in the clinical divisions of medicine, surgery, and other specialty fields preparing for practice in a given specialty.
Medical Teaching	Includes physicians with teaching appointments in medical schools, hospitals, nursing schools, or other institutions of higher learning.
Medical Research	Includes physicians in all phases of investigating medical problems regardless of source of funds for such research. Also includes physicians in fellowship programs.
Administration	Includes physicians in administrative activities in a hospital, health facility, health agency, clinic, group or any other organization.
Other Activity	Includes physicians employed by insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.
Inactive	Includes physicians who are retired, semi-retired, permanently disabled, temporarily not in practice, or not active for other reasons.
Not Classified	Includes physicians who did not provide information on their type of practice or their present employment.

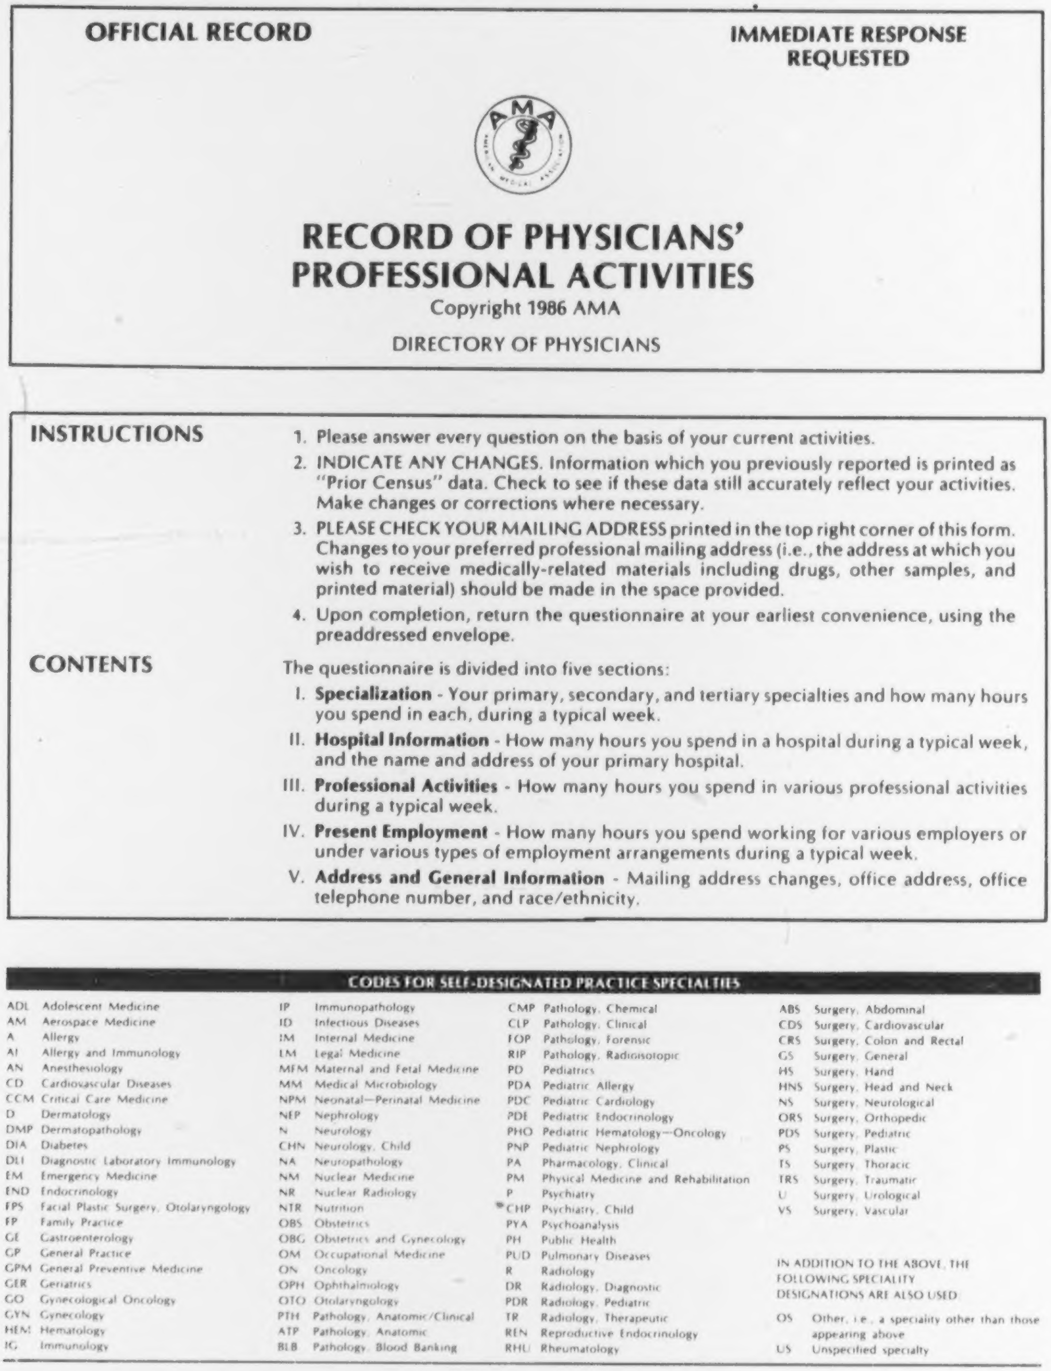
West Virginia	Kentucky, Maryland, Ohio, Pennsylvania, Virginia
Wisconsin	Illinois, Iowa, Michigan, Minnesota
Wyoming	Colorado, Idaho, Montana, Nebraska, South Dakota, Utah

*Excludes Alaska and Hawaii

Appendix D

Record of Physician's Professional Activities (PPA Questionnaire)



OFFICIAL RECORD

IMMEDIATE RESPONSE REQUESTED

RECORD OF PHYSICIANS' PROFESSIONAL ACTIVITIES

Copyright 1986 AMA

DIRECTORY OF PHYSICIANS

INSTRUCTIONS

1. Please answer every question on the basis of your current activities.
2. INDICATE ANY CHANGES. Information which you previously reported is printed as "Prior Census" data. Check to see if these data still accurately reflect your activities. Make changes or corrections where necessary.
3. PLEASE CHECK YOUR MAILING ADDRESS printed in the top right corner of this form. Changes to your preferred professional mailing address (i.e., the address at which you wish to receive medically-related materials including drugs, other samples, and printed material) should be made in the space provided.
4. Upon completion, return the questionnaire at your earliest convenience, using the preaddressed envelope.

CONTENTS

The questionnaire is divided into five sections:

I. **Specialization** - Your primary, secondary, and tertiary specialties and how many hours you spend in each, during a typical week.

II. **Hospital Information** - How many hours you spend in a hospital during a typical week, and the name and address of your primary hospital.

III. **Professional Activities** - How many hours you spend in various professional activities during a typical week.

IV. **Present Employment** - How many hours you spend working for various employers or under various types of employment arrangements during a typical week.

V. **Address and General Information** - Mailing address changes, office address, office telephone number, and race/ethnicity.

CODES FOR SELF-DESIGNATED PRACTICE SPECIALTIES

ADL	Adolescent Medicine
AM	Aerospace Medicine
A	Allergy
AI	Allergy and Immunology
AN	Anesthesiology
CD	Cardiovascular Diseases
CCM	Critical Care Medicine
D	Dermatology
DMP	Dermatopathology
DIA	Diabetes
DLI	Diagnostic Laboratory Immunology
EM	Emergency Medicine
END	Endocrinology
FPS	Facial Plastic Surgery, Otolaryngology
FP	Family Practice
GE	Gastroenterology
GP	General Practice
GPM	General Preventive Medicine
GER	Geriatrics
GO	Gynecological Oncology
GYN	Gynecology
HEM	Hematology
IG	Immunology
IP	Immunopathology
ID	Infectious Diseases
IM	Internal Medicine
LM	Legal Medicine
MFM	Maternal and Fetal Medicine
MM	Medical Microbiology
NPM	Neonatal—Perinatal Medicine
NEP	Nephrology
N	Neurology
CHN	Neurology, Child
NA	Neuropathology
NM	Nuclear Medicine
NR	Nuclear Radiology
NTR	Nutrition
OBS	Obstetrics
OBG	Obstetrics and Gynecology
OM	Occupational Medicine
ON	Oncology
OPH	Ophthalmology
OTO	Otolaryngology
PTH	Pathology, Anatomic/Clinical
ATP	Pathology, Anatomic
BLB	Pathology, Blood Banking
CMP	Pathology, Chemical
CLP	Pathology, Clinical
FOP	Pathology, Forensic
RIP	Pathology, Radioisotopic
PD	Pediatrics
PDA	Pediatric Allergy
PDC	Pediatric Cardiology
PDE	Pediatric Endocrinology
PHO	Pediatric Hematology—Oncology
PNP	Pediatric Nephrology
PA	Pharmacology, Clinical
PM	Physical Medicine and Rehabilitation
P	Psychiatry
CHP	Psychiatry, Child
PYA	Psychoanalysis
PH	Public Health
PUD	Pulmonary Diseases
R	Radiology
DR	Radiology, Diagnostic
PDR	Radiology, Pediatric
TR	Radiology, Therapeutic
REN	Reproductive Endocrinology
RHU	Rheumatology
ABS	Surgery, Abdominal
CDS	Surgery, Cardiovascular
CRS	Surgery, Colon and Rectal
GS	Surgery, General
HS	Surgery, Hand
HNS	Surgery, Head and Neck
NS	Surgery, Neurological
ORS	Surgery, Orthopedic
PDS	Surgery, Pediatric
PS	Surgery, Plastic
TS	Surgery, Thoracic
TRS	Surgery, Traumatic
U	Surgery, Urological
VS	Surgery, Vascular

IN ADDITION TO THE ABOVE, THE FOLLOWING SPECIALITY DESIGNATIONS ARE ALSO USED:

OS	Other, i.e., a speciality other than those appearing above
US	Unspecified specialty

RECORD OF PHYSICIANS' PROFESSIONAL ACTIVITIES

I. SPECIALIZATION

The specialty(ies) which you indicated previously as primary, secondary, and/or tertiary are listed below along with the ***number of hours you spent per typical week. Please indicate any changes in your specialization.*** **(See other side of this questionnaire for list of specialties.)**

	Prior Census		Changes If Any	
	SPECIALTY	HOURS	SPECIALTY	HOURS
PRIMARY			23-25	26-28
SECONDARY			29-31	32-34
TERTIARY			35-37	38-40

II. HOSPITAL INFORMATION

HOURS PER WEEK: Prior Census | Changes If Any

1) How many hours per week do you spend in a hospital and/or office in a hospital ..... HRS ____ HRS ____ 41-43

2) What is the name and address of the hospital where you admit most of your patients? (If you do not admit patients give the name and address of your primary hospital.)

Name of Hospital

Street Address

City, State, ZIP 44-50

III. PROFESSIONAL ACTIVITIES

How many hours per week do you typically spend in each of the following professional activities? If you do not spend any hours on any particular activity, indicate this by entering zero (0) hours in the appropriate space.

HOURS PER WEEK: Prior Census | Changes If Any

1) POST-GRADUATE training program as a resident or fellow .... HRS ____ HRS ____ 51-53

Including the current year, how many years have you spent in all post-graduate training programs? .... YEARS ____ 54-55

Are you a

56 ☐ 1 RESIDENT
☐ 2 FELLOW *(in an educational or research training program DISTINCT FROM an accredited residency program)*

Is your fellowship
57 ☐ 1 CLINICAL *(primarily patient care)?*
☐ 2 RESEARCH *(primarily non-patient care)?*

In question 2-6, please indicate time spent in medical activities that are NOT part of your post-graduate training programs. If none, indicate zero (0) hours.

2) PRACTICE INVOLVING DIRECT CARE OF PATIENTS? .... HRS ____ HRS ____ 58-60

Direct care means seeing patients, it also includes patient services by such physicians as pathologists and radiologists. EXCLUDE time spent in training, teaching, or research. INCLUDE time spend on record keeping, other office work, and travel time connected with your patients.

3) ADMINISTRATIVE ACTIVITIES, as a Salaried Staff Member or Executive of an Organization? .... HRS ____ HRS ____ 61-63

EXCLUDE time spent on record keeping and office work connected with the management of your own practice. INCLUDE activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic, or group or any other organization by which you may be salaried as an executive or administrative staff member.

4) MEDICAL TEACHING? .... HRS ____ HRS ____ 64-66

Include hours spent in medical teaching or training as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.

5) MEDICAL RESEARCH? .... HRS ____ HRS ____ 67-69

Include activites (whether funded or unfunded) performed to develop new medical knowledge, potentially leading to publication.

6) OTHER MEDICAL ACTIVITIES *(not listed above)* NOT involving direct care of patients? .... HRS ____ HRS ____ 70-72

7) ALL PROFESSIONAL ACTIVITIES (the total of Questions 1-6) .... HRS ____ HRS ____ 73-75

If you indicated 20 hours or less on Question 7, or if none of the above categories applies to you, please answer Question 8.

8) Are you:

76 ☐ 1 Retired ☐ 2 Semi-Retired ☐ 3 Permanently Disabled
☐ 4 Temporarily not in practice
☐ 5 Not active for other reasons (Specify) ____________

IV. PRESENT EMPLOYMENT

Please indicate the current number of hours per week for each of the following employers/employment arrangements. (Note: This should NOT be confused with where your hours are spent.) Please answer EVERY question 1 thru 9. If you spend NO time in the category, indicate this by entering zero (0) hours.

HOURS PER WEEK: Prior Census | Changes If Any

1) Self-employed solo practice .... HRS ____ HRS ____ 77-79

2) Two physician practice
80 ☐ 1 Full or part owner ☐ 2 Employee .... HRS ____ HRS ____ 81-83

3) Group practice .... HRS ____ HRS ____ 84-86

Group practice is
- three or more physicians, formally organized to
- provide medical care, consultation, diagnosis, and/or treatment through
- the joint use of equipment and personnel, and with
- income from medical practice distributed in accordance with methods previously determined by members of the group

GROUP NAME AND ADDRESS:

PLEASE ENTER CORRECTIONS BELOW:

Group Name

Street Address

City, State, ZIP

4) Medical School (or parent university) .... HRS ____ HRS ____ 87-89

5) Non-Government Hospital .... HRS ____ HRS ____ 90-92

6) City/County/State Government

a) Hospital .... HRS ____ HRS ____ 93-95

b) Other than hospital .... HRS ____ HRS ____ 96-98

7) U.S. Government

a) Hospital .... HRS ____ HRS ____ 99-101

b) Other than hospital .... HRS ____ HRS ____ 102-104

Indicate Federal Agency:

105 ☐ 1 Army ☐ 2 Navy ☐ 3 Air Force
☐ 4 Public Health Service (CC & CS)
☐ 5 Veterans Administration
☐ 6 Other (Specify) ____________

8) Other patient care employment .... HRS ____ HRS ____ 106-108

9) Other non-patient care employment not listed above .... HRS ____ HRS ____ 109-111

(all types of insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.)

V. ADDRESS & GENERAL INFORMATION

1) Professional mailing address:

Please enter any address corrections below:

Street Address

Box Number, Suite, Department Name, etc.

City State ZIP

2) Is your professional mailing address (item #1 above) also your office address?

112 ☐ 1 YES
☐ 2 NO ⟶ (If NO, please provide your office address)

Street Address CARD 2/23-52

Box Number, Suite, Department Name, etc. 53-82

City 83-105 State 106-107 ZIP 108-112

3) Office telephone number:

( ) CARD 1/113-115 116-122

4) FOR RESEARCH PURPOSES ONLY.
Indicate your race/ethnicity:

123 ☐ 1 White, non-Hispanic
☐ 2 Black, non-Hispanic
☐ 3 Hispanic
☐ 4 Asian/Oriental
☐ 5 Other

Appendix E

Self-Designated Practice Specialty Codes on the AMA Physician Masterfile

Self-designated practice specialties listed on the AMA Physician Masterfile have historically related to the record-keeping needs of the American Medical Association and do not imply ''recognition'' or ''endorsement of any field of medical practice by the Association. The AMA Division of Survey and Data Resources manages the Masterfile and records a physician's practice specialty based on physician response to the Physicians' Professional Activities Questionnaire (PPA Census). The full list of Masterfile codes for self-designated practice specialties is pre-printed on the questionnaire and physicians indicate the average number of hours spent during a typical week in those specialties to which they limit their practice. The specialty with the greatest number of hours becomes the primary specialty, the specialty with the next greatest number of hours become the secondary specialty, and so on. The fact that a physician chooses to designate a given specialty on our records does not necessarily mean that the physician has been trained or has special competence to practice the self-designated specialty. Appendix B-2 lists codes for the self-designated practice specialties included on the AMA Physician Masterfile.

On the other hand, American Specialty Board certification indicates that a physician has received preparation in accordance with established educational standards of one of the 23 member boards of the American Board of Medical Specialties (ABMS). It is not uncommon for a physician to be board certified in one field of medicine while limiting practice to another. As of December 31, 1983, 39,562 (14.5%) of all board certified physicians in the United States were certified by a board other than that corresponding to their Primary Specialty, and 248,471 (47.8%) were non-board certified. In addition to maintaining physicians' self-designated practice specialties on the AMA Physician Masterfile, the AMA collects primary specialty board certification data through the American Board of Medical Specialties. Because both board certification and self-designated practice specialty are important, these data are included in the individual physician's record as well as in the *American Medical Directory*.

Neither self-designated practice specialty nor certification by a member board of ABMS should be confused with the fact that a physician has successfully completed a program (or programs) of accredited graduate medical education. Accreditation is the process whereby the Accreditation Council for Graduate Medical Education (ACGME) grants public recognition to a specialized program which meets certain established educational standards as determined through initial and subsequent periodic evaluations by one of the 24 Residency Review Committees. AMA collects physicians' residency training data through an annual Census of all ACGME accredited residency training programs. These data, along with self-designated practice specialties and certifications by a member board of ABMS appear under separate headings on the AMA Physician Profile.
